1 . Main points

- Following the 1.4% decrease in June 2022, monthly construction output decreased 0.8% in volume terms in July 2022; this is the second consecutive decrease in monthly construction output after seven consecutive months of growth.
- The decrease in monthly construction output in July 2022 came solely from a decrease in repair and maintenance (2.6%) as new work saw a slight increase (0.3%) on the month.
- At the sector level, the main contributors to the decrease seen in July 2022 were public housing new work, and public and private housing repair and maintenance, which decreased 13.1%, 8.0% and 2.6%, respectively.
- The level of construction output in July 2022 was 2.1% (£300 million) above the February 2020 pre-coronavirus (COVID-19) pandemic level; new work was below at 1.9% (£181 million) its February 2020 level, while repair and maintenance work was 9.7% (£481 million) above the February 2020 level.
- Despite the monthly decrease, construction output increased 1.4% in the three months to July 2022; this came solely from an increase seen in new work (2.7%) as repair and maintenance saw a slight decrease (0.7%), and this is the ninth consecutive period of growth in the three-month-on-three-month series, but the slowest rate of growth since the three months to December 2021 (1.0%).

2 . Construction output in July 2022

Monthly construction output decreased 0.8% in July 2022. This follows the 1.4% decrease in June 2022. This is the second consecutive decrease in monthly construction output, following seven consecutive months of growth in the sector between November 2021 and May 2022.

Figure 1: The monthly all work construction output index in July 2022 saw a decrease on the month, solely coming from a decrease in repair and maintenance (2.6%)

Monthly all work index, chained volume measure, seasonally adjusted, Great Britain, January 2010 to July 2022

Figure 1: The monthly all work construction output index in July 2022 saw a decrease on the month, solely coming from a decrease in repair and maintenance (2.6%)

Monthly all work index, chained volume measure, seasonally adjusted, Great Britain, January 2010 to July 2022

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Monthly output records began in January 2010.

Anecdotal evidence received from returns for the [Monthly Business Survey for Construction and Allied Trades \(MBS\)](#) and the [Business Insights and Conditions Survey \(BICS\)](#) continues the narrative around the increased prices for certain construction products. As in previous months, increased costs of products, most notably concrete, plaster, bricks, sand, gravel and asphalt-related products, are mentioned. There have also been continued mentions of higher fuel and energy costs, and VAT tax increases for red diesel, which have had an impact again this month. This is supported as [the annual rate of all construction work price growth is 9.6% in June 2022](#) and is a record high since the Construction Output Price Indices series began in January 2014.

Along with high prices for construction products, we had evidence from businesses who stated that new orders are starting to slow, with many mentioning the cost of living crisis for households and businesses as a possible reason to explain this contraction in demand. This is backed up by the recent [new orders in the construction industry data](#), which saw a fall of 10.4% in Quarter 2 (Apr to June) 2022.

The [warm weather experienced in July 2022](#) also saw a number of amber and red weather warnings and record-breaking temperatures across much of the country. For the construction industry, working days were lost during this time, as suggested in the anecdotal evidence from returns received for the MBS. Businesses reported that it was too hot to work because of the extreme weather conditions and record-breaking temperatures particularly seen around 18 and 19 July.

Detailed growth rates

Table 1: Construction output main figures, July 2022, Great Britain
Seasonally adjusted, chained volume measure, £ million and percentage change

Type of work	Value £ million	Most recent month on the previous month	Most recent month on year	Most recent three- months on three- months	Most recent three- months on year	Difference in construction output February 2020 to July 2022
Total all work	14,755	-0.8	4.3	1.4	4.4	2.1
Total new work	9,305	0.3	4.1	2.7	4.0	-1.9
Total repair and maintenance	5,450	-2.6	4.8	-0.7	5.2	9.7
New housing						
Public	385	-13.1	-7.5	-4.7	0.8	-34.1
Private	3,368	1.6	12.2	4.5	10.7	7.1
Other new work						
Infrastructure	2,257	-1.7	-11.2	-0.8	-8.5	20.2
Public	747	-3.3	-3.1	-3.8	-2.8	-17.5
Private industrial	595	-1.2	41.6	14.3	56.8	20.7
Private commercial	1,953	6.0	9.0	5.1	2.4	-21.3
Repair and maintenance						
Public housing	575	-8.0	-3.2	-1.1	3.2	-18.6
Private housing	1,991	-2.6	0.5	-4.7	1.2	13.3
Non-housing	2,884	-1.4	9.8	2.4	8.8	15.1

Source: Office for National Statistics – Construction Output and Employment

Despite the monthly fall in output in July 2022, the level is still above the pre-coronavirus (COVID-19) pandemic level (February 2020) at 2.1% above (£200 million).

Month-on-month construction output growth in July 2022

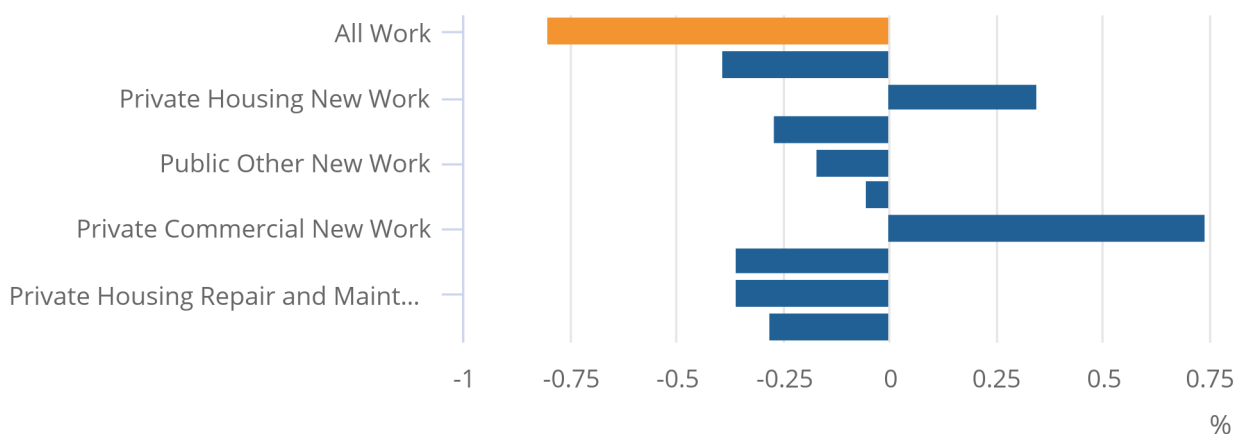

The 0.8% in construction output in July 2022 represents a decrease of £114 million in monetary terms compared with June 2022, with seven out of the nine sectors seeing a decrease on the month.

Figure 2: All work saw a decline on the month in July 2022 (0.8%) with seven out of the nine sectors seeing a fall

Contributions to monthly growth (July 2022 compared with June 2022), chained volume measure, seasonally adjusted, Great Britain

Figure 2: All work saw a decline on the month in July 2022 (0.8%) with seven out of the nine sectors seeing a fall

Contributions to monthly growth (July 2022 compared with June 2022), chained volume measure, seasonally adjusted, Great Britain

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

Public housing new work, and public and private housing repair and maintenance were the largest contributions to the monthly decrease in July 2022, decreasing 13.1% (£58 million), 8.0% (£50 million), and 2.6% (£53 million), respectively.

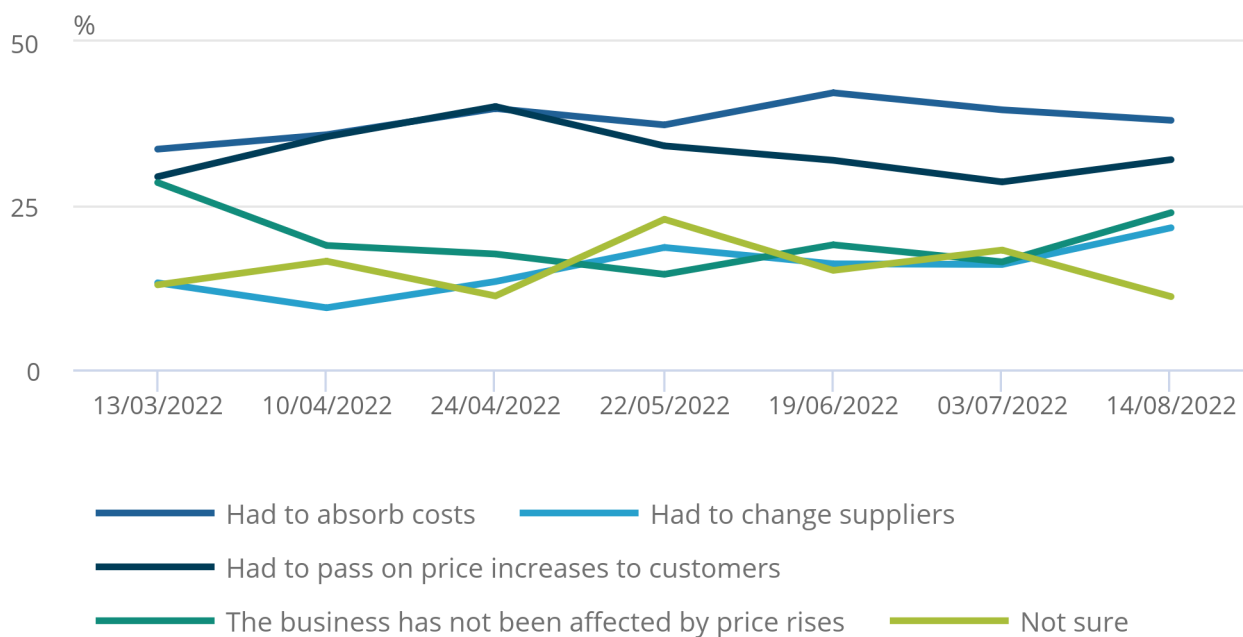

Decreases were seen across all the repair and maintenance sectors this month. Anecdotal evidence gathered from businesses over the month suggested the cost of living crisis was a major factor as businesses and households are spending less on repair and maintenance work. Many firms suggested that the high prices for construction materials meant some repair and maintenance projects were being put on hold (whether temporarily or permanently). In contrast, some new projects were continuing as costings were agreed prior to the recent price increases and, as such, the construction firms were having to absorb these. This is further backed up by the latest BICS data (Figure 3); when businesses were asked in which ways their business had been affected by any price rises they had experienced, 38% of construction firms reported they had to absorb costs. This figure has remained relatively stable since late April 2022 and has consistently been the highest reported response option.

Figure 3: The impact of price rises in the construction industry is being split between firms absorbing the costs and passing increases onto the customer

Impact of price rises, construction businesses not permanently stopped trading, weighted by count, UK, 7 March 2022 to 21 August 2022

Figure 3: The impact of price rises in the construction industry is being split between firms absorbing the costs and passing increases onto the customer

Impact of price rises, construction businesses not permanently stopped trading, weighted by count, UK, 7 March 2022 to 21 August 2022

Source: Office for National Statistics – Business Insights and Conditions Survey (BICS)

Notes:

1. Dates in the chart refer to the midpoint of the corresponding wave.
2. Final weighted results of Wave 52, 54, 55, 57, 59, 60 and 63 of the Office for National Statistics' (ONS') Business Insights and Conditions Survey (BICS).
3. The question asked on BICS is: "In which of the following ways, if any, has your business been affected by price rises?"
4. Construction output estimates are for Great Britain, whereas BICS estimates are for the UK construction sector, with other notable differences including sample size and response rates to the surveys.

Like in recent months, strong price growth for certain construction products continued to be an issue in July 2022. Using the implied deflator, which is the best indicator of construction prices until the next [Construction Output Price Indices release on 11 November 2022](#), annual price growth for all construction work is 9.5% in July 2022.

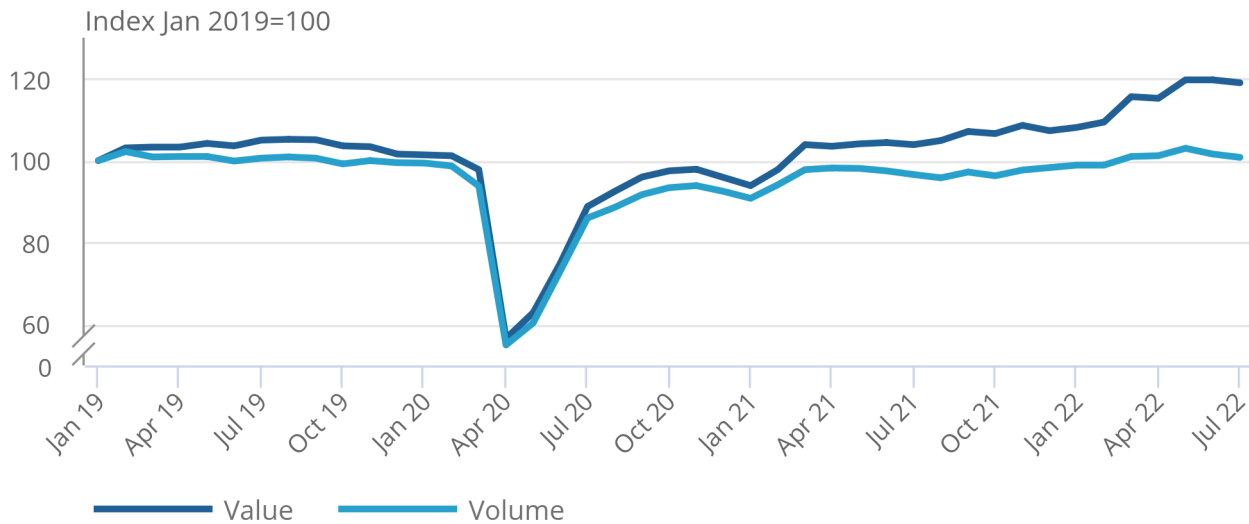

This is further illustrated for total construction output in value terms (for instance, before the impact of price changes) and in volume terms (for instance, after the impact of price changes) in Figure 4. Despite construction output in volume terms having recovered to above its pre-pandemic level since the start of 2022, the gap between value and volume estimates has continued to widen as prices continue to rise.

Figure 4: The impact of price rises in the construction industry in 2022 continues to see the gap widen between the value and volume of construction output

All construction work monthly index, January 2019 to July 2022, current price (value) and chained volume measure (volume), seasonally adjusted, Great Britain

Figure 4: The impact of price rises in the construction industry in 2022 continues to see the gap widen between the value and volume of construction output

All construction work monthly index, January 2019 to July 2022, current price (value) and chained volume measure (volume), seasonally adjusted, Great Britain

Source: Office for National Statistics – Construction Output and Employment

Three-month-on-three-month construction output growth in July 2022

In contrast to the monthly fall, construction output rose 1.4% (£616 million) in the three months to July 2022. This is the slowest rate of growth in the three-month-on-three-month series since December 2021 (1.0%). Despite this slowdown in growth, this is the ninth consecutive increase in the three-month-on-three-month series. The increase came solely from a increase in new work (2.7%) as repair and maintenance decreased slightly (0.7%).

Figure 5: All work saw an increase in the three months to July 2022 (1.4%) with private new housing the main contributor

Contributions to three-month-on-three-month growth (May to July 2022 compared with February to April 2022), chained volume measure, seasonally adjusted, Great Britain

Figure 5: All work saw an increase in the three months to July 2022 (1.4%) with private new housing the main contributor

Contributions to three-month-on-three-month growth (May to July 2022 compared with February to April 2022), chained volume measure, seasonally adjusted, Great Britain

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

Four out of the nine sectors saw an increase in the three months to July 2022, with the largest contributors being private industrial, private commercial and private housing new work. These sectors increased 14.3% (£222 million), 5.1% (£277 million) and 4.5% (£438 million), respectively.

3 . Construction in Great Britain data

[Output in the construction industry](#)

Dataset | Released 12 September 2022

Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector.

[Output in the construction industry: sub-national and sub-sector](#)

Dataset | Released 12 August 2022

Quarterly non-seasonally adjusted type of work and regional data at current prices, Great Britain.

[Construction output price indices](#)

Dataset | Released 12 August 2022

A summary of the Construction Output Indices (OPIs) from April to June 2022, UK.

[Output in the Construction Industry - Customise my data](#)

Dataset | Released 12 September 2022

Customise My Data (CMD) is ONS' new way of providing filterable, explorable data suitable to individual user needs. Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector.

4 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2020) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

5 . Measuring the data

Quality and methodology

More quality and methodology information (QMI) is available in the:

- [Construction output QMI](#)
- [Construction output price indices QMI](#)

Revisions

In line with the [National Accounts revision policy](#), there are no revisions to previously published data, and July 2022 is being produced for the first time.

The next monthly construction output release will be published on 12 October 2022, and we are open for revisions for all periods. These revisions will be consistent with the quarterly national accounts release that will be published on 30 September 2022, and they will incorporate improved source data, updated seasonal adjustment parameters, and additional updated data as would happen in all quarterly national accounts releases. This includes new Value Added Tax (VAT) turnover data for Quarter 4 (Oct to Dec) 2021 and Quarter 1 (Jan to Mar) 2022.

Sub-national and sub-sector construction output

Data on new orders supplied by [Barbour ABI](#) are used to model the breakdown of the overall output figures for Great Britain into the lower-level and regional data seen in Tables 1 and 2 of our [Construction output: sub-national and sub-sector](#) dataset.

Bias adjustment

Typically, since the move to monthly gross domestic product (GDP) estimates, an [adjustment](#) to address any bias in survey responses for construction output is applied to the early construction output monthly estimates.

As the response rate for July 2022 is slightly lower (75.3% turnover response compared with a normal turnover response of approximately 79% for this month in the year, pre-coronavirus (COVID-19) pandemic), no comparable historical data are available at the time of the first estimate for a reference month, so we have not applied a bias adjustment for July 2022.

Differences with monthly GDP construction estimates

In Blue Book 2021, [a new framework](#) was introduced to improve how we produce volume estimates of GDP for balanced years as part of the supply use process. This framework included the implementation of double-deflated industry-level gross value added (GVA) for the first time. This improvement was reflected in the [September 2021 quarterly national accounts](#) and [October 2021 monthly GDP estimates](#) for the first time.

As a result, volume estimates in the monthly GDP and construction outputs releases will differ for the period 1997 to 2019 because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction estimates will align, however, from January 2020 onwards on a growth basis.

Articles on the [impact of double deflation](#) and [Blue Book changes](#) provide information and indicative effects of this change to industry-level GVA volume.

Construction statistics annual

The 2021 edition of the [construction statistics annual](#) will be released on 18 October 2022.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

1A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED INDEX NUMBERS BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE ON PREVIOUS MONTH

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4A.M CONSTRUCTION OUTPUT: VALUE SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4M CONSTRUCTION OUTPUT: VALUE NON-SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
