# 1 . Main points

- Public sector net borrowing (excluding public sector banks) decreased by £0.1 billion to £16.1 billion in the current financial year-to-date (April 2017 to May 2017), compared with the same period in 2016; this is the lowest year-to-date net borrowing since 2008.
- The Office for Budget Responsibility (OBR) forecast that public sector net borrowing (excluding public sector banks) will be £58.3 billion during the financial year ending March 2018.
- Public sector net borrowing (excluding public sector banks) decreased by £0.3 billion to £6.7 billion in May 2017, compared with May 2016; this is the lowest May borrowing since 2007.
- Public sector net borrowing (excluding public sector banks) decreased by £25.6 billion to £46.6 billion in the financial year ending March 2017 (April 2016 to March 2017), compared with the financial year ending March 2016; this is the lowest net borrowing since the financial year ending March 2008.
- The Office for Budget Responsibility (OBR) forecast that public sector net borrowing (excluding public sector banks) would be £51.7 billion during the financial year ending March 2017.
- Public sector net debt (excluding public sector banks) was £1,737.3 billion at the end of May 2017, equivalent to 86.5% of gross domestic product (GDP); an increase of £121.6 billion (or 2.9 percentage points as a ratio of GDP) on May 2016.
- Public sector net debt (excluding both public sector banks and Bank of England) was £1,603.8 billion at the end of May 2017, equivalent to 79.8% of GDP; an increase of £34.8 billion (or a decrease of 1.4 percentage points as a ratio of GDP) on May 2016.
- Central government net cash requirement decreased by £14.3 billion; from £7.4 billion (deficit), to a surplus of £6.9 billion in the current financial year-to-date (April 2017 to May 2017), compared with the same period in 2016; this is the lowest year-to-date central government net cash requirement since 2000.

# 2 . Sub-regional public sector finances scoping study

On 23 May 2017, we published the first [Country and regional public sector finances bulletin](#). On 28 June 2017 we will be publishing a sub-regional public sector finances scoping study. A consultation seeking feedback on both of these publications will be launched on the ONS website on 3 July 2017 and will close on 23 August 2017.

# 3 . Pre-release access to ONS statistics

On 15 June 2017, the [National Statistician announced](#) that pre-release access to ONS statistics will stop with effect from 1 July 2017.

The public sector finances bulletin is jointly produced by members of the Government Statistical Service (GSS) working in both ONS and HM Treasury. GSS staff will continue to work together to produce the bulletin but ministers and those officials not directly involved in the production and release of statistics will not have access to them in advance of publication.

## 4 . What's changed in this release?

This section presents information on aspects of data or methodology that is important to understand when reading this bulletin. Where appropriate, further details of individual changes are discussed in the “Quality and methodology” section of this bulletin.

### How early estimates of the components of net borrowing are improved over time

Since the first estimate of public sector net borrowing (excluding public sector banks) for the financial year ending March 2017 (April 2016 to March 2017), was published on 25 April 2017, the estimate has been revised downwards by £5.4 billion, from £52.0 billion to £46.6 billion; these are still not final figures and will be revised over the coming months as we replace our initial estimates with provisional and then final outturn data.

The data for the latest month of every release contains some forecast data. The initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months, as profiles of tax receipts, along with departmental and local government spending are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

[Appendix G](#): Revisions to the first reported estimate of financial-year-end public sector net borrowing (excluding public sector banks) by sub-sector; summarises revisions to the first estimate of public sector net borrowing (excluding public sector banks) by sub-sector for the last 6 financial years. Revisions are shown at 6 and 12 months after year end.

We have published an article, [Public Sector Finances – Sources summary and their timing](#), which provides a brief summary of the different sources used and the implications of using those data in the monthly public sector finances (PSF) statistical bulletin.

### Lloyds share sales

On 17 May 2017, [the government announced](#) that it had sold its entire stake in Lloyds Banking Group. The proceeds of this sale are now fully recorded within the public sector finances.

As with similar share sales, the proceeds will reduce the central government net cash requirement (CGNCR) and public sector net debt (PSND) by an amount corresponding to the cash raised from the sale, but have no impact on public sector net borrowing.

## 5 . Things you need to know about this release

### What are the most important terms I need to know?

Public sector net borrowing excluding public sector banks (PSNB ex) measures the gap between revenue raised (current receipts) and total spending (current expenditure plus net investment (capital spending less capital receipts)). Public sector net borrowing is often referred to as “the deficit”.

The public sector net cash requirement (PSNCR) represents the cash needed to be raised from the financial markets over a period of time to finance the government's activities. This can be close to the deficit for the same period but there are some transactions, for example, loans to the private sector, which need to be financed but do not contribute to the deficit. It is also close but not identical to the changes in the level of net debt between two points in time.

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to private sector organisations including overseas institutions, largely as a result of issuing gilts and treasury bills, less the amount of cash and other short-term assets it holds.

While borrowing (or the deficit) represents the difference between total spending and receipts over a period of time, debt represents the total amount of money owed at a point in time.

The debt has been built up by successive government administrations over many years. When the government borrows (that is, runs a deficit), this normally adds to the debt total. So reducing the deficit is not the same as reducing the debt.

If you'd like to know more about the relationship between debt and deficit, please refer to our article [The debt and deficit of the UK public sector explained](#).

## What does the public sector include?

In the UK, the public sector consists of five sub-sectors: central government, local government, public non-financial corporations, Bank of England and public financial corporations (that is, public sector banks – currently only Royal Bank of Scotland (RBS)).

The figures quoted in this bulletin exclude public financial corporations (unless otherwise stated) as the reported position of both borrowing and debt would be dominated and distorted by the inclusion of RBS's balance sheet (and transactions) given its size relative to the rest of the public sector.

Additionally, the government's fiscal rules are based on aggregates that exclude public sector banks.

The sub-sector breakdown of public sector net borrowing is summarised in Table PSA2 in the [Public Sector Finances Tables 1 to 10: Appendix A dataset](#).

## Should I look at monthly or financial year-to-date data to understand public sector finances?

A financial year is an accounting period of 12 months running from 1 April one year to 31 March the following year. For example, the financial year ending March 2016 comprises the months from April 2015 to March 2016.

Due to the volatility of the monthly data, the cumulative financial year-to-date borrowing figures provide a better indication of the position of the public finances than the individual months.

## Are our figures adjusted for inflation?

All monetary values in the PSF bulletin are expressed in terms of "current prices, that is, they represent the price in the period to which the expenditure or revenue relates and are not adjusted for inflation.

In order to compare data over long time periods, to aid international comparisons and provide an indication of a country's ability to service borrowing and debt, commentators often discuss changes over time to fiscal aggregates in terms of gross domestic product (GDP) ratios. GDP represents the value of all the goods and services currently produced by the UK economy in a period of time.

## **Are our figures adjusted for seasonal patterns?**

All monetary values in the PSF bulletin are not seasonally adjusted. We recommend you use year-on-year comparisons (be it cumulative financial year-to-date or individual monthly borrowing figures) rather than making month-on-month comparisons.

## **Are our monthly figures likely to change over time?**

Each PSF bulletin contains the first estimate of public sector borrowing for the most recent period and is likely to be revised in later months as more data become available.

In publishing monthly estimates, it is necessary to use a range of different types of data sources. Some of these are subject to revision as budget estimates (forecasts) are replaced by out-turn data and these then feed into the published aggregates. In addition to those that stem from updated data sources, revisions can also result from methodology changes. An example of the latter is the changes that were due to the introduction of improved methodology for the recording of Corporation Tax, Bank Corporation Tax Surcharge receipts and Bank Levy implemented in the PSF estimates released in February 2017.

## **6 . How much is the public sector borrowing?**

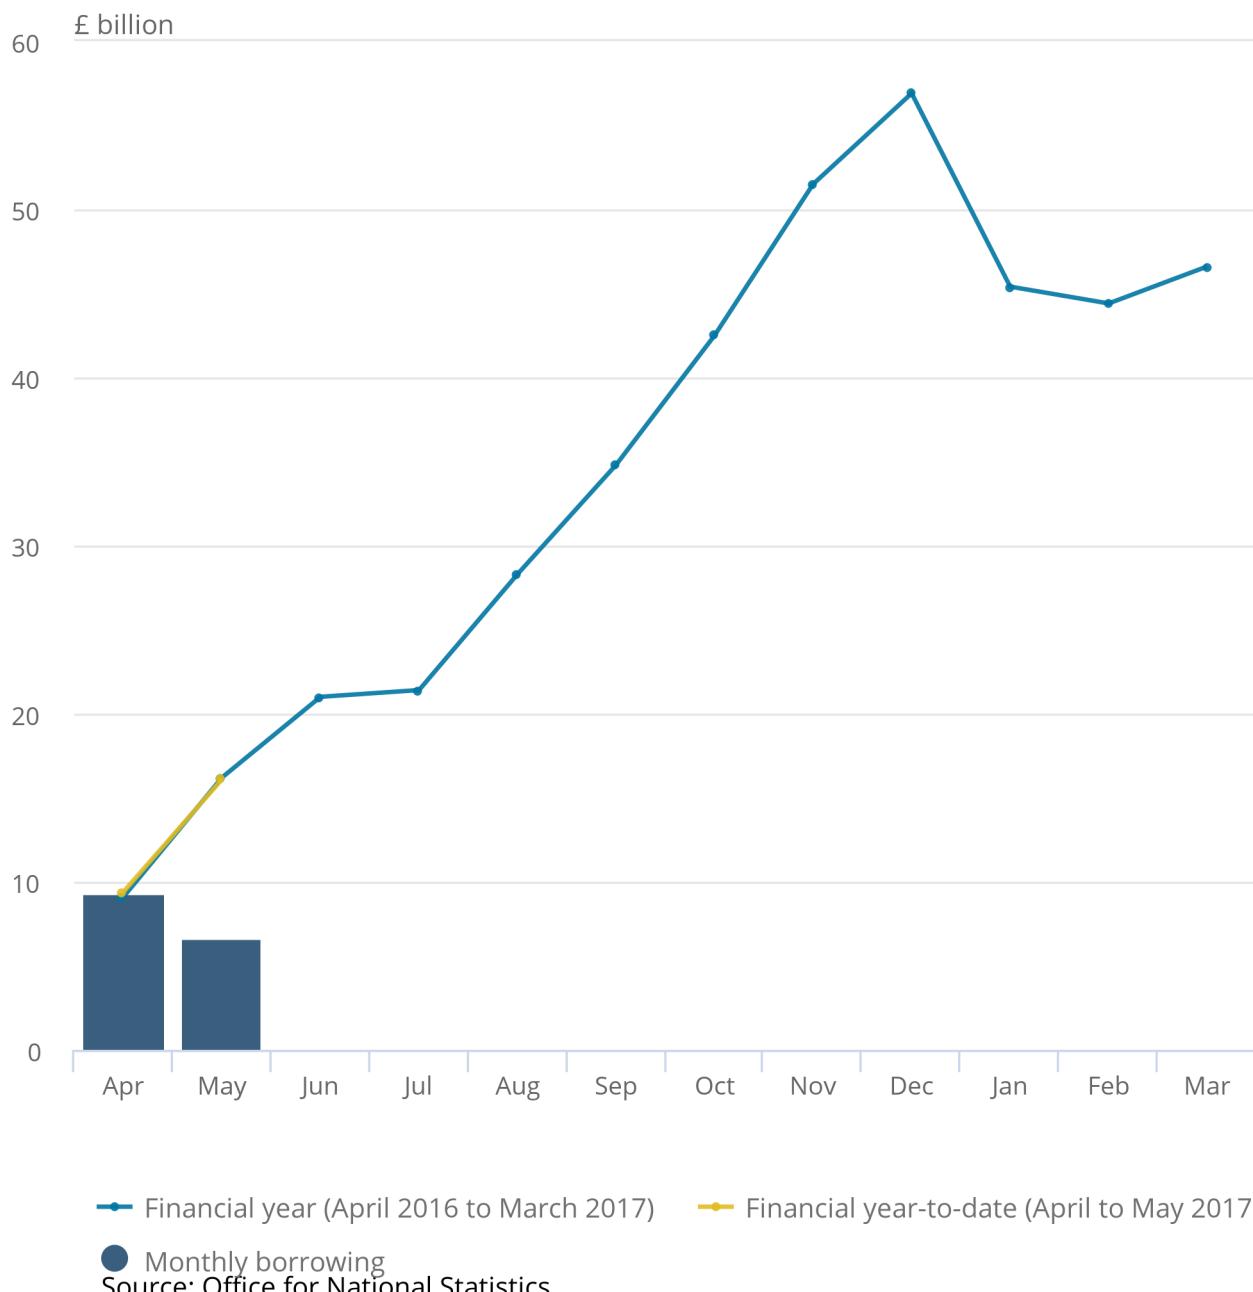

In the current financial year-to date, (April 2017 to May 2017), the public sector spent more money than it received in taxes and other income. This meant it had to borrow £16.1 billion; £0.1 billion less than in the same period in the previous financial year.

Of this £16.1 billion of public sector net borrowing excluding public sector banks (PSNB ex), £12.9 billion related to the cost of the "day-to-day" activities of the public sector (the current budget deficit), while £3.2 billion related to capital spending (or net investment) such as infrastructure.

Figure 1 presents cumulative public sector net borrowing (excluding public sector banks) by month in the current financial year and compares the cumulative borrowing with that in the previous financial year.

**Figure 1: Cumulative public sector net borrowing (excluding public sector banks) by month, current and previous financial year-to-date (April to May)**

Figure 1: Cumulative public sector net borrowing (excluding public sector banks) by month, current and previous financial year-to-date (April to May)

Source: Office for National Statistics

The difference between central government's income and spending makes the largest contribution to the amount borrowed by the public sector. In the current financial year-to-date, £16.5 billion of the £16.1 billion borrowed by the public sector was by central government. Over the same period, local government net borrowing was in surplus by £2.9 billion.

In the current financial year-to-date, central government received £110.2 billion in income; including £79.1 billion in taxes. This was around 5% more than in the same period in the previous financial year.

Over the same period, central government spent £123.5 billion; around 4% more than in the same period in the previous financial year. Of this amount, just below two-thirds was spent by central government departments (such as health, education and defence), around one-third on social benefits (such as pensions, unemployment payments, Child Benefit and Maternity Pay) with the remaining being spent on capital investment and interest on government's outstanding debt.

Figure 2 summarises public sector borrowing by sub-sector in the current financial year-to-date and compares these measures with the same period in the previous financial year.

This presentation splits PSNB ex into each of its four sub-sectors: central government, local government, public corporations and Bank of England.

A further breakdown (receipts, expenditure (both current and capital) and depreciation) is provided for central government, local government and public corporations; with central government current receipts and current expenditure being presented in further detail.

**Figure 2: Contributions to public sector net borrowing (excluding public sector banks) in financial year-to-date (April to May 2017) compared with the same period in the previous financial year**

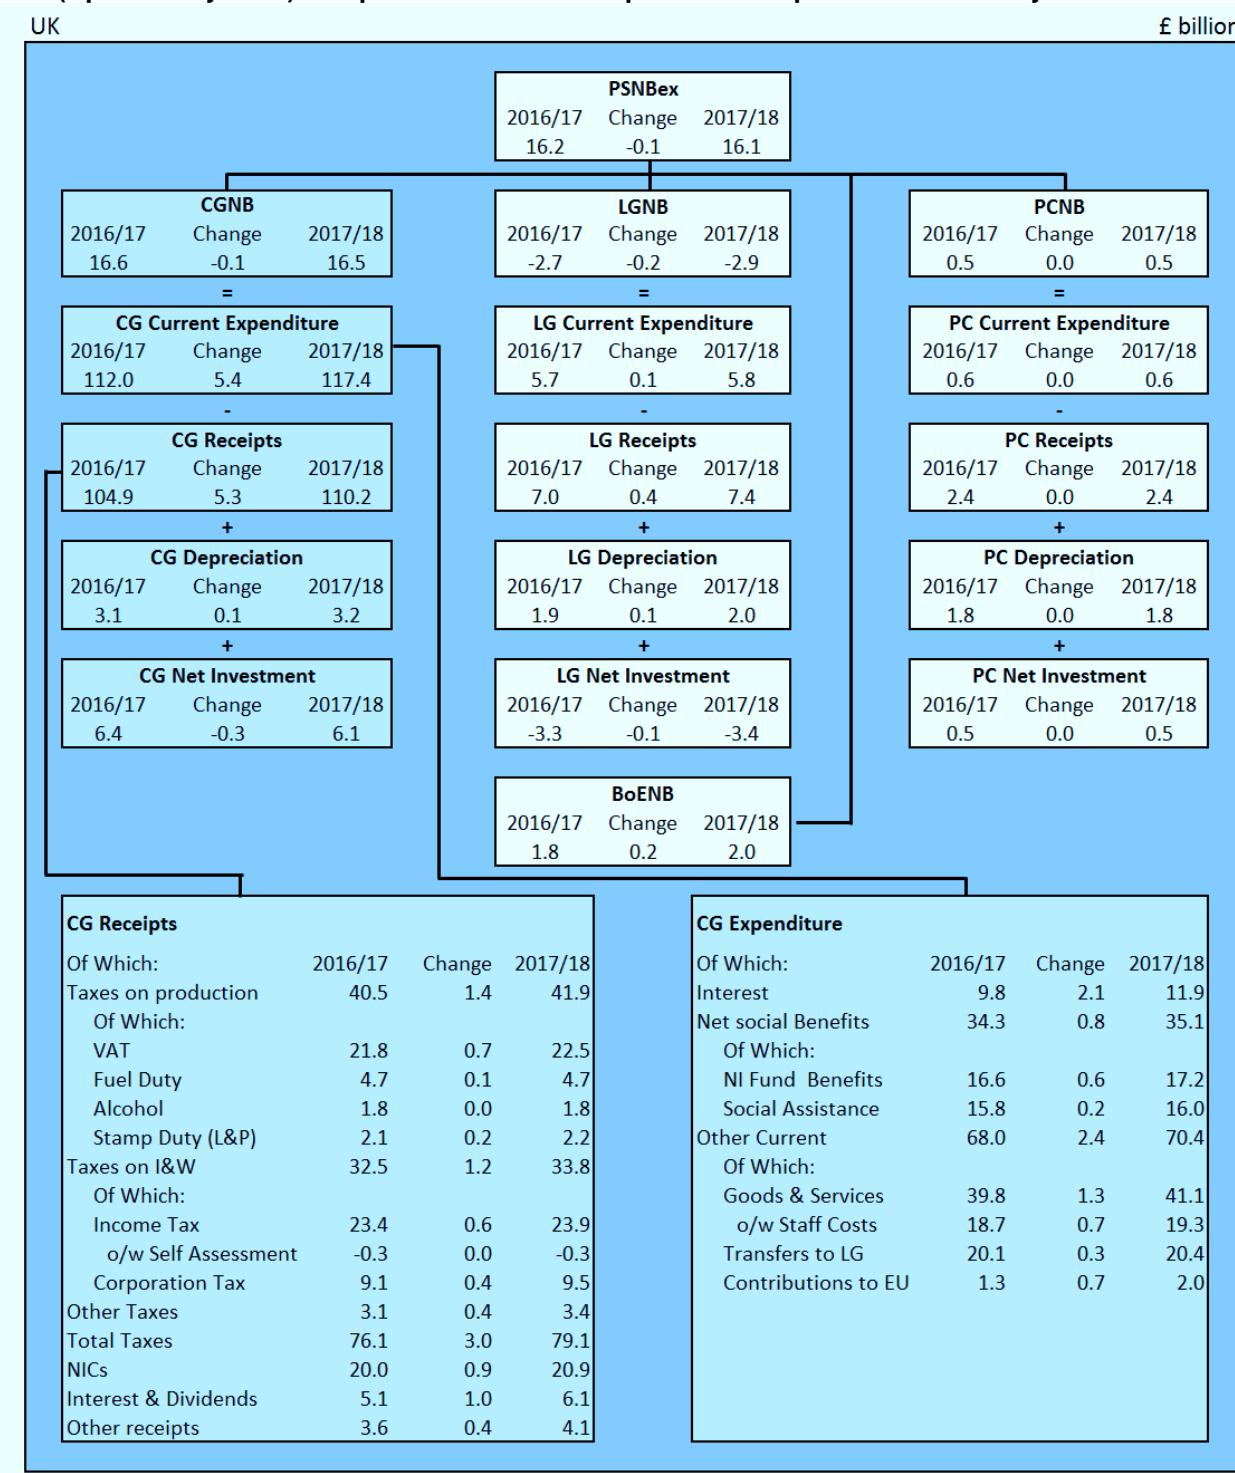

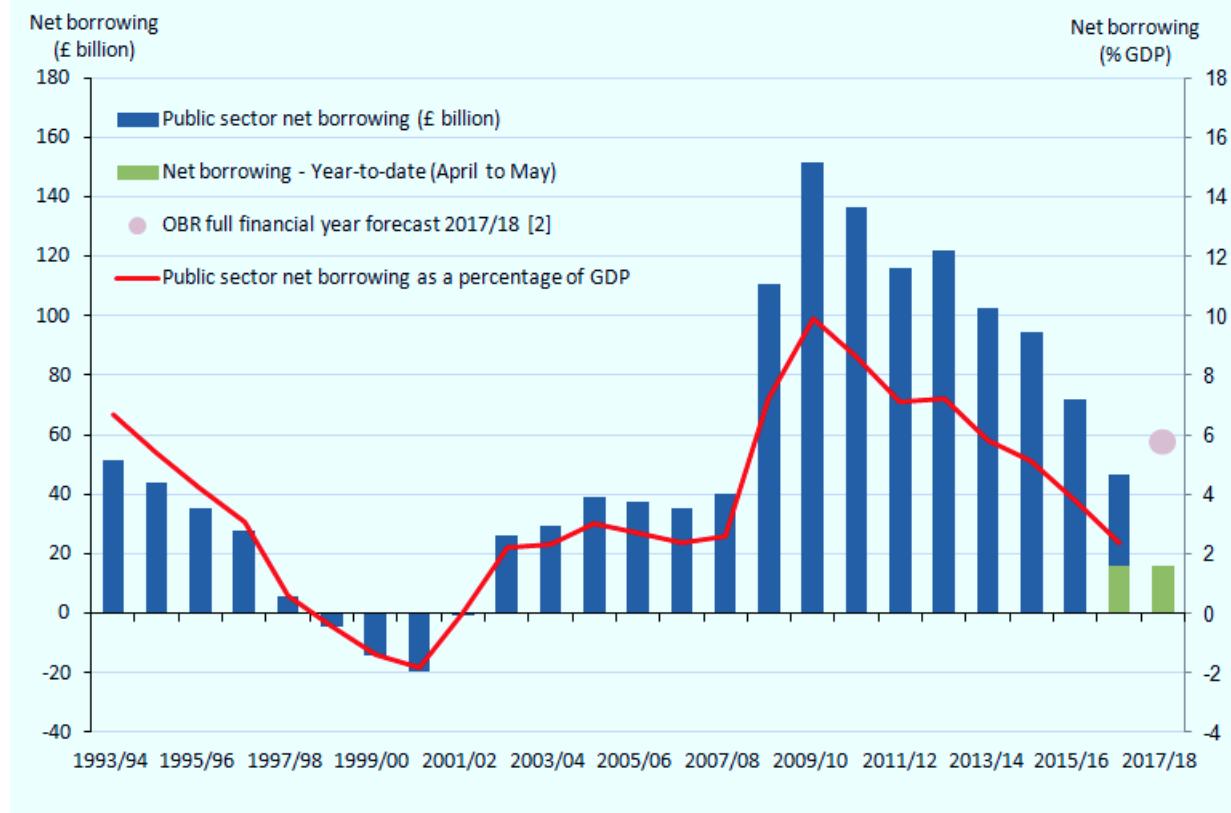

Figure 3 illustrates that annual borrowing has generally been falling since the peak in the financial year ending March 2010 (April 2009 to March 2010).

Early estimates indicate that in the full financial year ending March 2017 (April 2016 to March 2017), the public sector borrowed £46.6 billion or 2.4% of gross domestic product (GDP). This was £25.6 billion lower than in the previous full financial year and around one-third of that in the financial year ending March 2010, when borrowing was £151.7 billion or 9.9 % of GDP.

**Figure 3: UK public sector net borrowing (excluding public sector banks), April 1993 to May 2017**

## Focusing on the current month

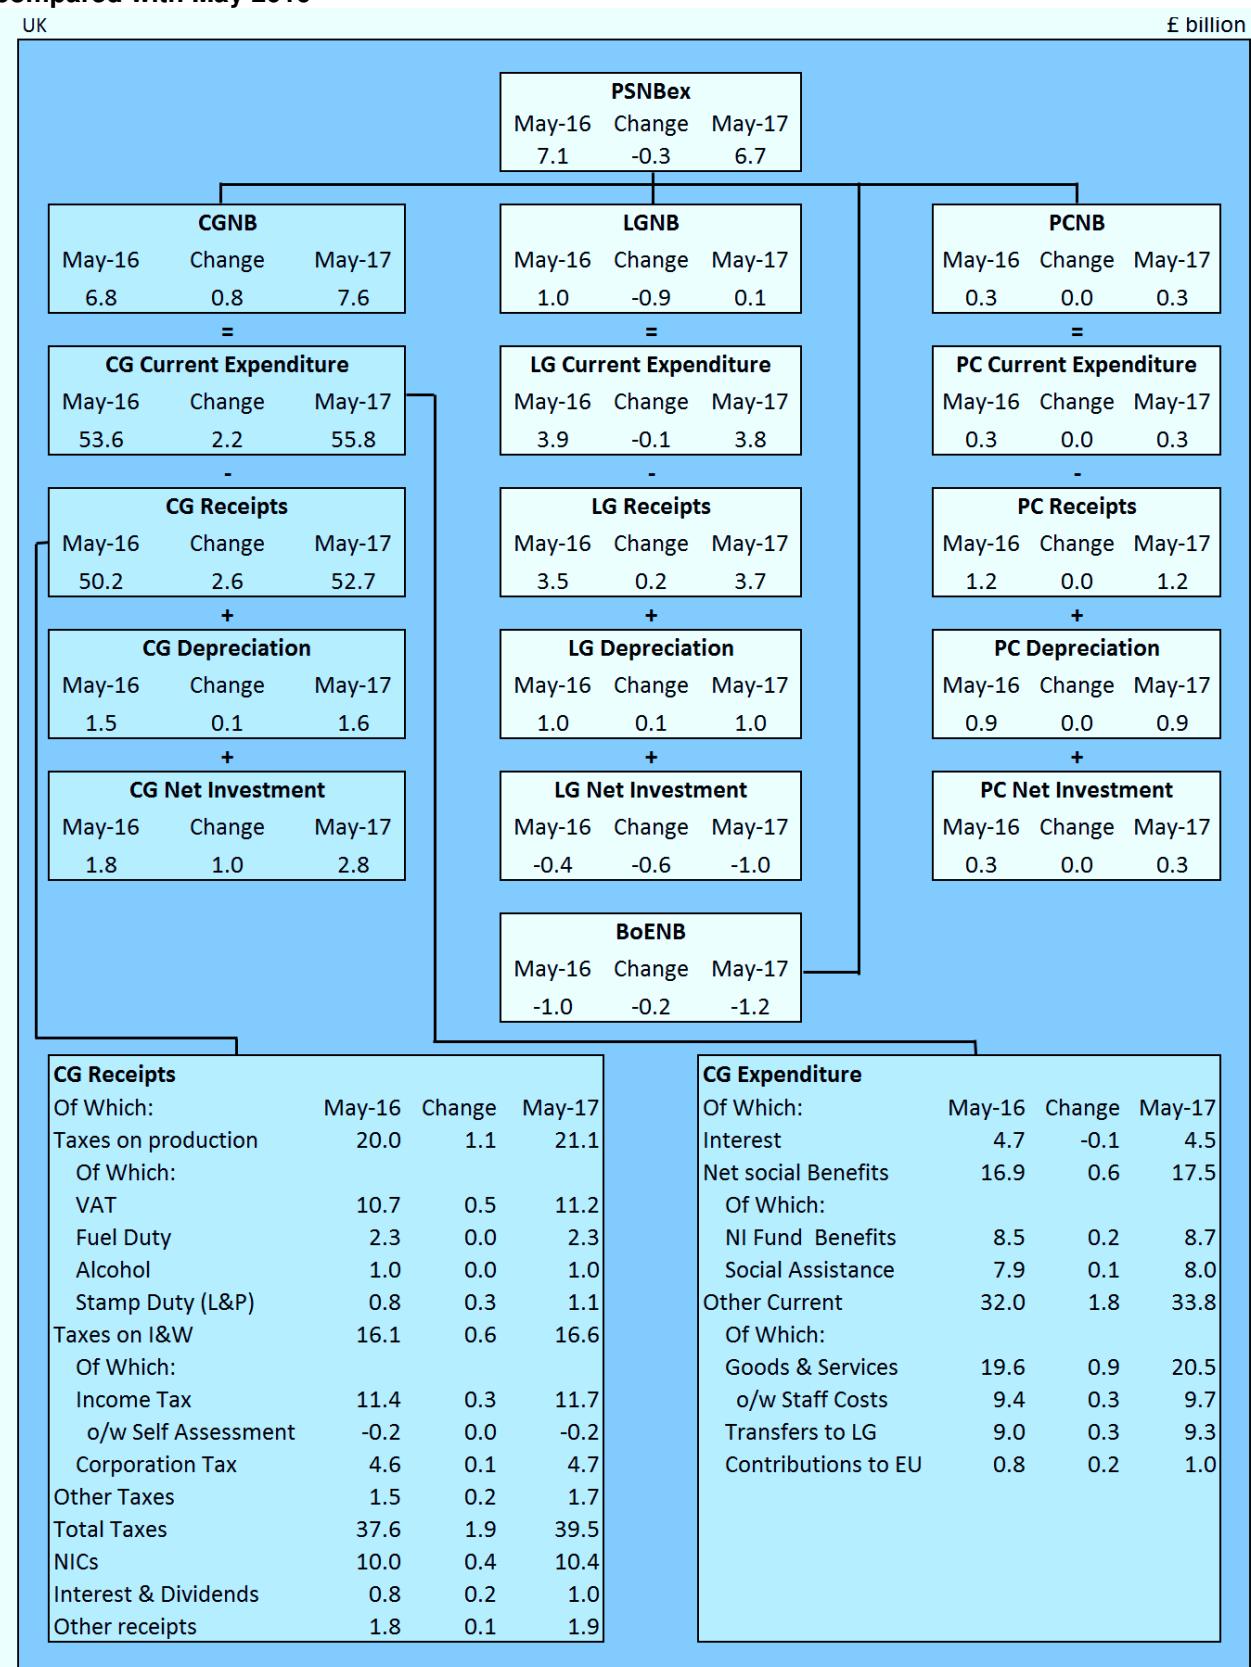

In May 2017, the public sector spent more money than it received in taxes and other income. This meant it had to borrow £6.7 billion; £0.3 billion less than in May 2016.

Figure 4 summarises public sector borrowing by sub-sector in May 2017 and compares this with the equivalent measures in the same month a year earlier (May 2016).

This presentation splits public sector net borrowing excluding public sector banks (PSNB ex) into each of its four sub-sectors: central government, local government, public corporations and Bank of England. A further breakdown (receipts, current expenditure, capital expenditure and depreciation) is provided for central government, local government and public corporations; with central government current receipts and current expenditure being presented in further detail.

Both local government and public corporations data for May 2017 are initial estimates. Most of these components are calculated by Office for National Statistics (ONS) based on [Office for Budget Responsibility \(OBR\)](#) forecasts. Administrative source data are used for transfers to each of these sectors from central government.

**Figure 4: Contributions to public sector net borrowing (excluding public sector banks) in May 2017 compared with May 2016**

## 7 . How big is public sector debt?

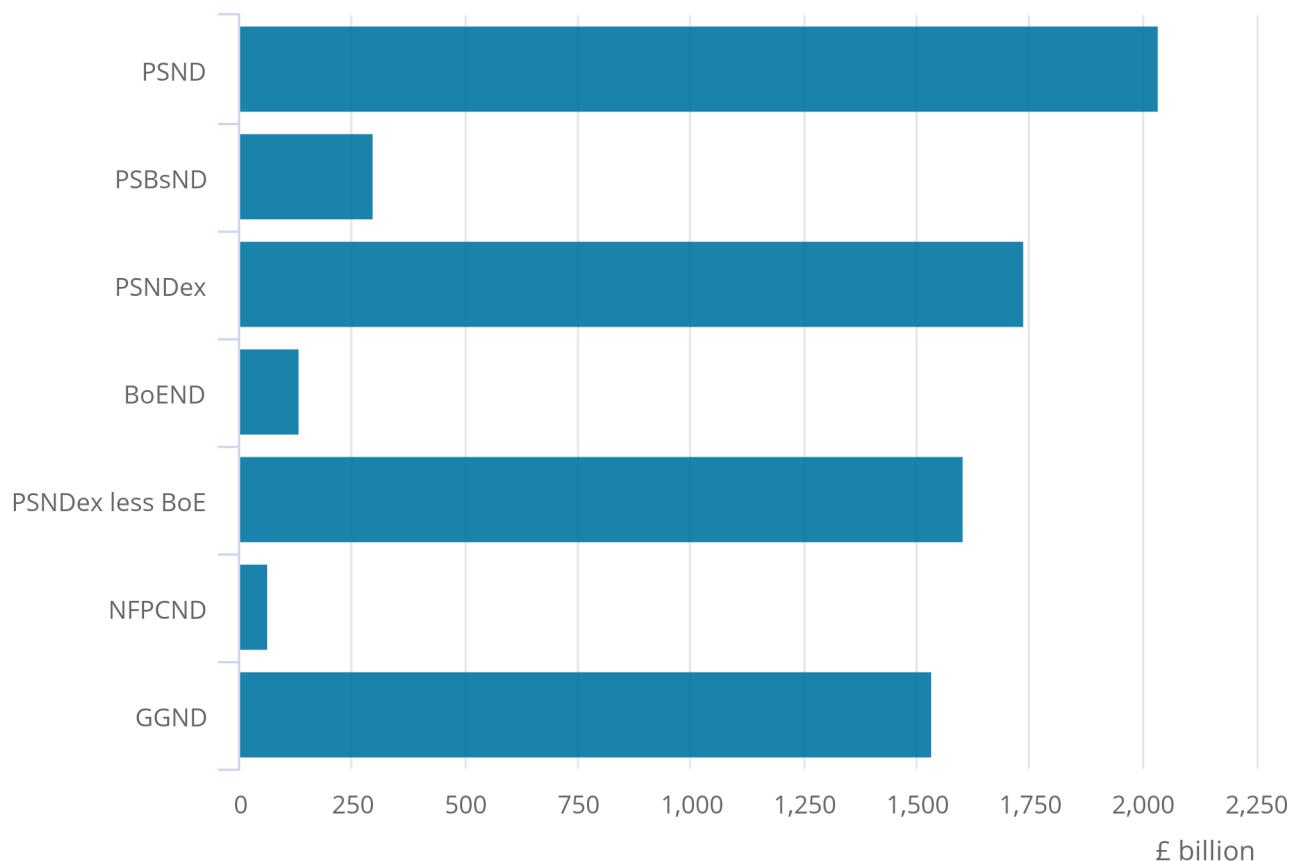

The amount of money owed by the public sector to the private sector stood at just above £1.7 trillion at the end of May 2017, which equates to 86.5% of the value of all the goods and services currently produced by the UK economy in a year (or gross domestic product (GDP)).

This £1.7 trillion (or £1,737.3 billion) debt at the end of May 2017 represents an increase of £121.6 billion since the end of May 2016. Of this £121.6 billion, £86.8 billion is attributable to debt accumulated within the Bank of England, nearly all of it in the Asset Purchase Facility. Of this £86.8 billion, £63.3 billion relates to the Term Funding Scheme (TFS).

Figure 5 breaks down outstanding public sector net debt at the end of May 2017 into the sub-sectors of the public sector. In addition to public sector net debt excluding public sector banks (PSND ex), this presentation includes the impact of public sector banks on debt.

**Figure 5: Sub-sector contributions to public sector net debt at May 2017, UK**

Figure 5: Sub-sector contributions to public sector net debt at May 2017, UK

Source: Office for National Statistics

**Source: Office for National Statistics**

**Notes:**

1. PSND - Public sector net debt.
2. PSBsND - Public sector Banks net debt.
3. PSNDex - Public sector net debt excluding public sector banks.
4. BoEND - Bank of England's contribution to net debt.
5. PSND ex Boe - Public sector net debt excluding both public sector banks and Bank of England.
6. NFPCND - Non-financial public corporations' net debt.
7. GGND - General government net debt.

Net debt is defined as total gross financial liabilities less liquid financial assets, where liquid assets are cash and short-term assets, which can be released for cash at short notice without significant loss. These liquid assets mainly comprise foreign exchange reserves and bank deposits.

Figure 6 presents public sector net debt excluding public sector banks (PSND ex) at the end of May 2017 by sub-sector. Time series for each of these component series are presented in Tables PSA8A to D in the [Public Sector Finances Tables 1 to 10: Appendix A dataset](#).

**Figure 6: Sub-sector split of public sector net debt (excluding public sector banks) at May 2017, UK (£ billion)**

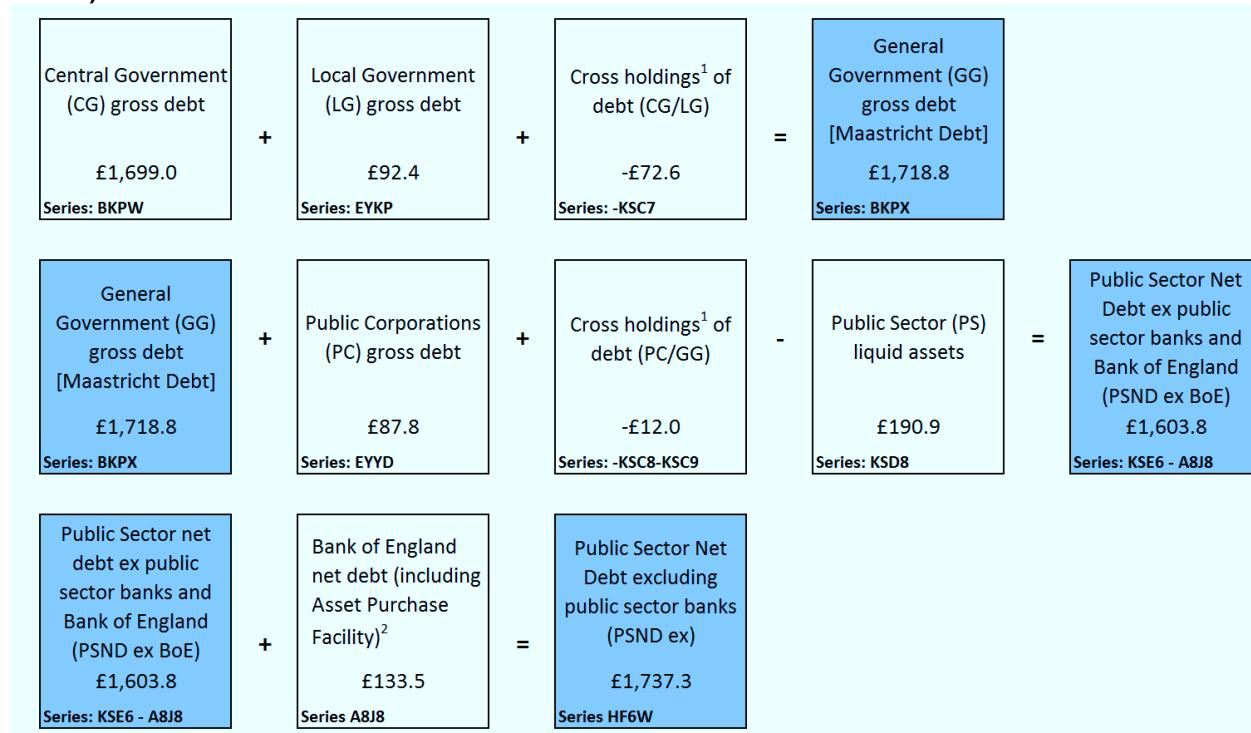

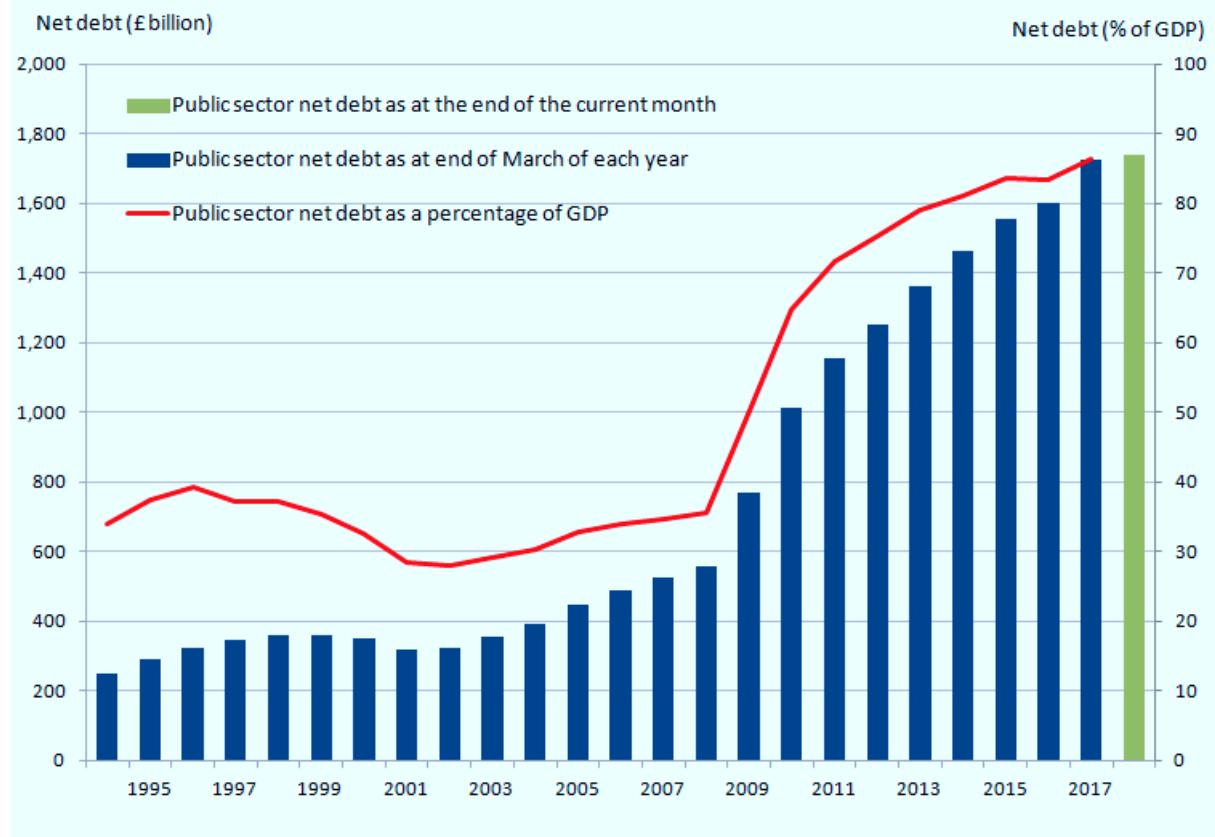

Figure 7 illustrates PSND ex from the financial year ending March 1994 to the end of May 2017.

**Figure 7: UK public sector net debt (excluding public sector banks), March 1994 to the end of May 2017**

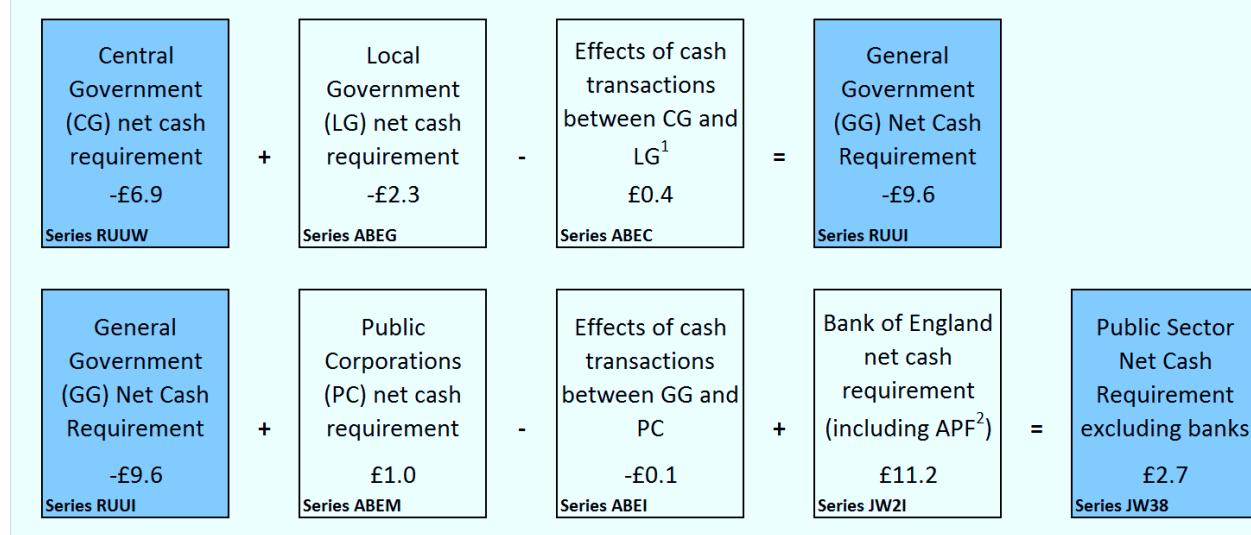

PSND ex increased at the time of the economic downturn. Since then, it has continued to increase but at a slower rate. The introduction of the Term Funding Scheme in late 2016 has led to a rise in net debt, as the loans provided under the scheme are not liquid assets and therefore do not net off in public sector net debt (against the liabilities incurred in providing the loans).

## 8 . How much cash does the public sector need to raise?

The net cash requirement is a measure of how much cash the public sector needs to raise from the financial markets (or pay out from its cash reserves) to finance its activities. This amount can be close to the deficit for the same period but there are some transactions, for example, lending to the private sector or the purchase of shares, that need to be financed but do not contribute to the deficit. Similarly, repayments of principal on loans extended by government or sales of shares will reduce the level of financing necessary but not reduce the deficit.

Figure 8 presents public sector cash requirement by sub-sector in the current financial-year-to-date (April 2017 to May 2017). Time series for each of these component series are presented in Table PSA7A in the [Public Sector Finances Tables 1 to 10: Appendix A dataset](#).

**Figure 8 - Sub-sector split of public sector net cash requirement excluding public sector banks, financial year-to-date (April to May 2017) UK (£ billion)**

Central government net cash requirement (CGNCR) is a focus for some users, as it provides an indication of the volume of gilts (government bonds) the Debt Management Office may issue to meet the government's borrowing requirements.

CGNCR is quoted both including and excluding the net cash requirement of Network Rail (NR) and UK Asset Resolution LTD (UKAR) (who manage the closed mortgage books of both Bradford & Bingley and Northern Rock Asset Management). It is the CGNCR excluding NR and UKAR that is the particular focus of users with an interest in the gilt market.

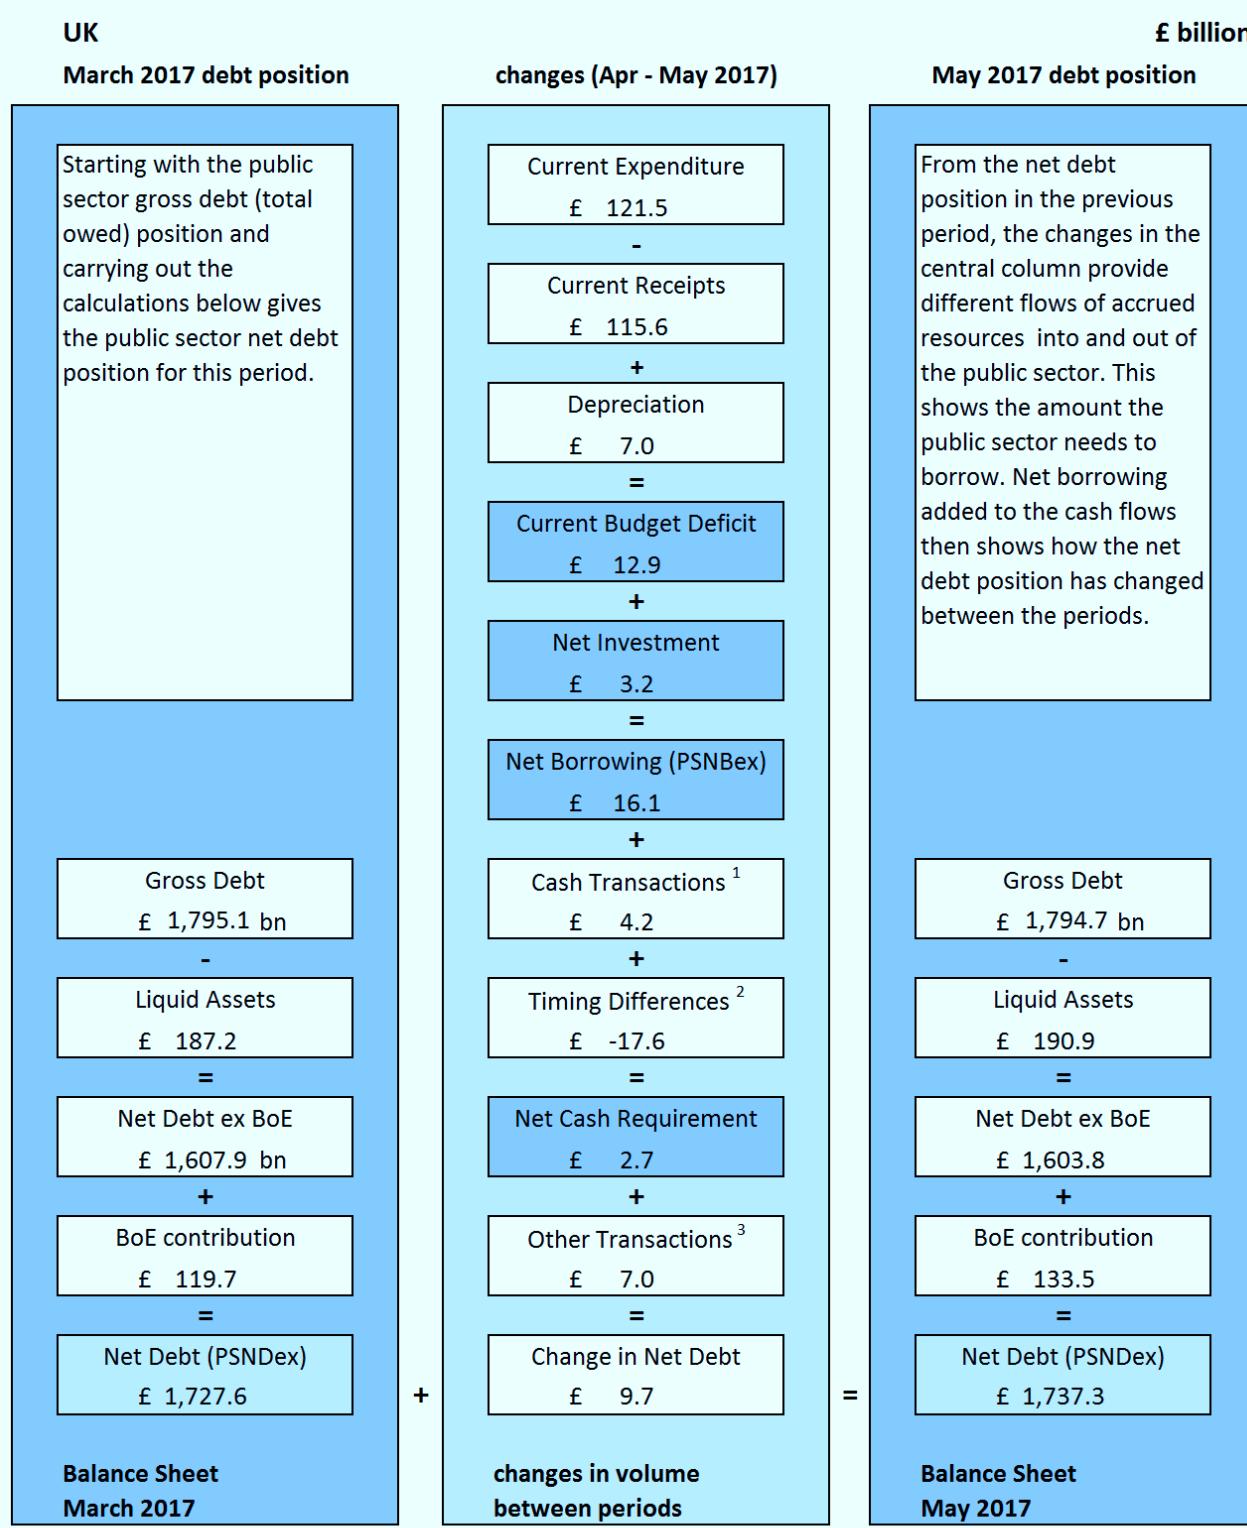

CGNCR excluding NR and UKAR decreased by £13.9 billion to a surplus of £4.8 billion in the current financial year-to-date (April 2017 to May 2017), compared with the same period in 2016.

## 9 . How was debt in the current financial year-to-date accumulated?

Figure 9 brings together the borrowing components detailed in Figure 2 to illustrate how the differences between income and spending (both current and capital) have led to the accumulation of debt in the current financial year-to-date.

This presentation excludes public sector banks, focusing instead on the public sector net borrowing excluding public sector banks (PSNB ex) measure.

**Figure 9: Changes in public sector finances (excluding public sector banks) financial year-to-date (April to May 2017) UK (£ billion)**

Source: Office for National Statistics

The reconciliation between public sector net borrowing and net cash requirement is presented in more detail in Table REC1 in the [Public Sector Finances Tables 1 to 10: Appendix A dataset](#).

## 10 . How do these figures compare with official forecasts?

The [Office for Budget Responsibility \(OBR\)](#) normally produces forecasts of the public finances twice a year (currently in March and November). The latest [OBR forecast](#) was published on 8 March 2017.

The government has adopted OBR forecasts as its official forecast.

OBR forecast that the public sector would borrow £51.7 billion during the financial year ending March 2017; a reduction of £20.5 billion on outturn for the financial year ending March 2016. The provisional outturn estimate for the financial year ending March 2017 was £46.6 billion, £5.1 billion less than the OBR forecast.

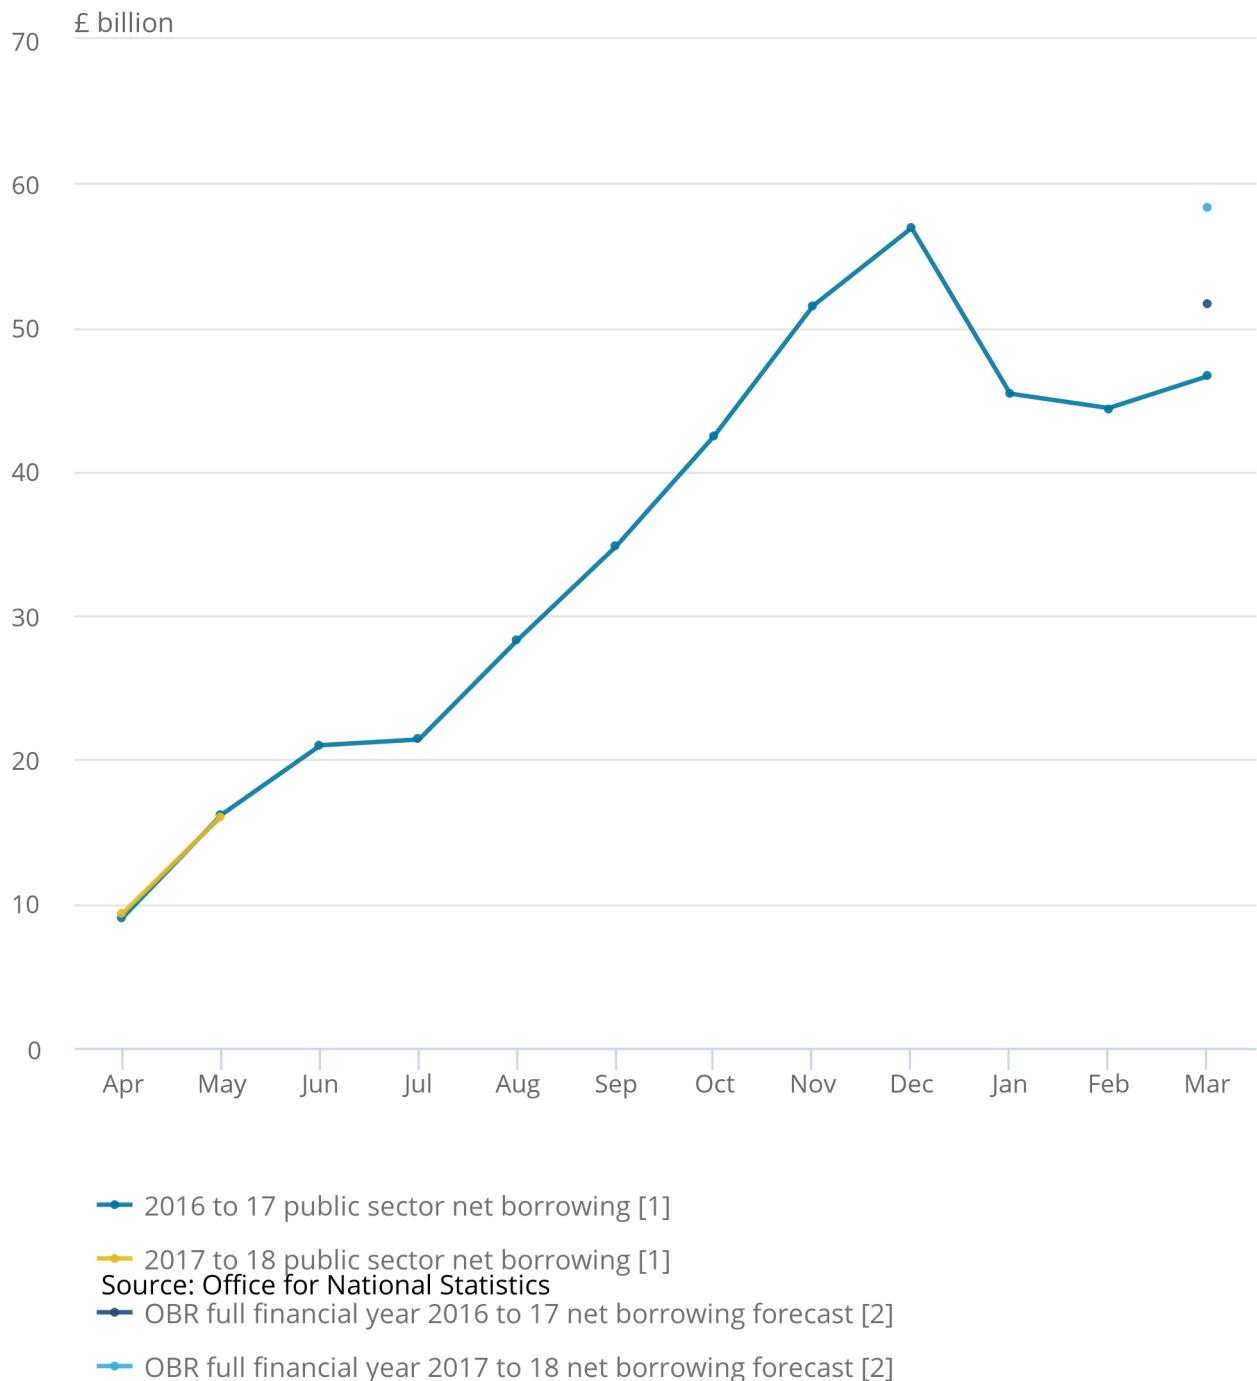

OBR forecast that the public sector will borrow £58.3 billion during the current financial year (April 2017 to March 2018); an increase of £11.7 billion on the current outturn estimate for the financial year ending March 2017. In the current financial year-to-date (April to May 2017), the public sector has borrowed £16.1 billion; a reduction of £0.1 billion on the same period in the last financial year.

Figure 10 presents the cumulative public sector net borrowing for the latest full and previous financial years. The figure also presents the OBR forecasts for the corresponding financial years.

**Figure 10: Cumulative public sector net borrowing by month, financial year ending March 2017 and current financial year-to-date (April to May 2017)**

UK, all data excluding public sector banks

Figure 10: Cumulative public sector net borrowing by month,  
financial year ending March 2017 and current financial year-to-  
date (April to May 2017)  
UK, all data excluding public-sector banks

Source: Office for National Statistics

Notes:

1. For the financial year ending 2017 (April 2016 to March 2017) and the financial year ending 2018 (April 2017 to March 2018).
2. OBR forecast for public sector net borrowing excluding public sector banks from March 2017 Economic and Fiscal Outlook (EFO).

Table 1 compares the first estimates of full financial year data against the OBR forecasts. Caution should be taken when comparing public sector finances data with OBR figures for the full financial year, as data are not finalised until after the financial year ends.

Initial estimates soon after the end of the financial year can be subject to sizeable revisions in later months.

In addition, the monthly path of spending and receipts is not smooth within the year and also can vary compared with previous years, both of which can affect year-on-year comparisons.

There can also be methodological differences between OBR forecasts and out-turn data. In its latest publication, OBR published a table within its [Economic and fiscal outlook supplementary fiscal tables: receipts and other – March 2017](#) titled “Table: 2.46 Items included in OBR forecasts that ONS have not yet included in out-turn”.

**Table 1: Public Sector Latest Outturn Estimates vs Office for Budget Responsibility (OBR) Forecasts**

UK, excluding public sector banks	£ billion <sup>1</sup> (not seasonally adjusted)					
	Financial year-to-date <sup>7</sup>			Full financial year <sup>8</sup>		
	2016/17	2017/18 <sup>8</sup>	% change	2016/17 Outturn	2017/18 OBR Forecast <sup>9</sup>	% change
Current budget deficit <sup>2</sup>	12.6	12.9	2.2	8.5	18.2	113.8

Source: Office for National Statistics

Notes:

1. Unless otherwise stated.
2. Current budget deficit is the difference between current expenditure (including depreciation) and current receipts.
3. Net investment is gross investment (net capital formation plus net capital transfers) less depreciation.
4. Net borrowing is current budget deficit plus net investment.
5. Net debt is financial liabilities (for loans, deposits, currency and debt securities) less liquid assets.
6. GDP at current market price.
7. Financial year-to-date refers to the period from April to May.
8. 2017/18 refers to financial year ending in March 2018 and 2016/17 refers to financial year ending in March 2017.
9. All OBR figures are from the OBR Economic and Fiscal Outlook published in March 2017.
10. NA denotes "not applicable".

## 11 . Revisions since previous release

Revisions can be the result of both updated data sources and methodology changes. This month the reported revisions to borrowing are largely the result of data changes, while the revisions to net debt are largely due to a change in methodology.

Table 2 summarises revisions to the headline statistics presented in this bulletin compared with those presented in the previous publication (23 May 2017).

**Table 2: Revisions between this bulletin (Jun 2017) and the previous bulletin (23 May 2017)**

7. Public sector net debt excluding public sector banks.
8. Public sector net cash requirement excluding public sector banks.
9. 2016/17 represents financial year ending 2017 (April 2016 to March 2017).
10. ytd equals Year-to-date, April to May 2017.

## Revisions to net borrowing

Figure 11 and 12 present the latest estimate of public sector net borrowing excluding public sector banks (PSNB ex) compared with that published in the previous bulletin (23 May 2017).

Each presentation splits PSNB ex into each of its four sub-sectors: central government, local government, public corporations and Bank of England (BoE).

A further breakdown of central government current receipts and current expenditure is presented to reflect the significance of these components.

## **Rewvisions to net borrowing in the financial year ending March 2017**

Since the previous bulletin, the provisional estimate of public sector net borrowing for financial year ending March 2017 (April 2016 to March 2017) has been revised down by £2.1 billion.

Figure 11 presents the latest estimate of public sector net borrowing (excluding public sector banks) over the period April 2016 to March 2017 and compares it with that presented in the previous bulletin (23 May 2017) to identify the drivers of the reported revisions to borrowing.

## **Rewvisions to net borrowing in April 2017**

The data for the latest month of every release contain some forecast data. The initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months, as profiles of tax receipts, along with departmental and local government spending are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

Since the previous bulletin, the provisional estimate of public sector net borrowing for April 2017 has been revised down by £1.0 billion.

Figure 12 presents the latest estimate of public sector net borrowing (excluding public sector banks) for April 2017 and compares it with that presented in the previous bulletin (23 May 2017) to identify the drivers of the reported revisions to borrowing.

**Figure 12: Latest estimate of public sector borrowing (excluding public sector banks) for the month April 2017 to that presented in the previous bulletin (23 May 2017)**

## **Rewards to net debt at the end of April 2017**

Since the previous publication, the estimate of public sector net debt excluding public sector banks (PSND ex) recorded at the end of April has decreased by £1.3 billion, largely due to new Bank of England Asset Purchase Facility Fund data.

## The reporting of errors in the public sector finance dataset

It is important to note that revisions do not occur as a result of errors; errors lead to corrections and are identified as such when they occur.

There are no errors reported in this bulletin.

## 12 . International comparisons of borrowing and debt

The UK government debt and deficit for Eurostat statistical bulletin is published quarterly (in January, April, July and December each year), to coincide with when the UK and other EU member states are required to report on their deficit (or net borrowing) and debt to the European Commission.

On 18 April 2017, we published the latest [UK government debt and deficit for Eurostat statistical bulletin](#), consistent with the [February 2017 public sector finance bulletin](#) (21 March 2017). In this publication we stated that:

- general government gross debt was £1,731.4 billion at the end of December 2016, equivalent to 89.3% of gross domestic product (GDP); an increase of £65.4 billion on December 2015
- general government deficit (or net borrowing) decreased by £24.2 billion to £57.2 billion (equivalent to 3.0% GDP) in 2016, compared with 2015

This bulletin reports unchanged estimates of general government gross debt and deficit to those published on 18 April 2017.

It is important to note that the GDP measure, used as the denominator in the calculation of the debt ratios in the UK government debt and deficit for the Eurostat statistical bulletin, differs from that used within the public sector finances statistical bulletin.

An article, [The use of GDP in public sector fiscal ratio statistics](#) explains that for debt figures reported in the monthly public sector finances, a 12-month GDP total centred on the month is employed, while in the UK government debt and deficit for Eurostat statistical bulletin, the total GDP for the preceding 12 months is used.

## 13 . Quality and methodology

The public sector finances [Quality and Methodology Information](#) document contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data

# UK Statistics Authority assessment of public sector finances

On 20 June 2017, the UK Statistics Authority published a letter confirming the designation of the monthly public sector finance bulletin as a [National Statistic](#). This letter completes the 2015 assessment of [public sector finances](#).

In order to meet the requirements of this assessment we published an article, [Quality assurance of administrative data used in the UK public sector finances](#). This report provides an assessment of the administrative data sources used in the compilation of the public sector finance statistics in accordance with the UK Statistics Authority's [Administrative Data Quality Assurance Toolkit](#).

## Country and regional public sector finances

On the 23 May 2017, we published [Country and regional public sector finances](#) for the first time.

Following our [consultation on Country and regional public sector finances](#), these Experimental Statistics aim to allow users to see what expenditure has occurred for the benefit of residents or enterprises in a particular country or region and what revenues have been raised in a particular country or region.

These sub-UK statistics are presented at a [NUTS1](#) geography.

## How are classification decisions made?

Each quarter we publish a [forward workplan](#) outlining the classification assessments we expect to undertake over the coming 12 months. To supplement this, each month a [classifications update](#) is published, which announces classification decisions made and includes expected implementation points (for different statistics) where possible.

[Classification decisions](#) are reflected in the public sector finances at the first available opportunity and, where necessary, outlined in this section of the statistical bulletin.

The [Monthly statistics on the public sector finances: a methodological guide](#) was last updated in August 2012. We are currently working to update this publication in 2017.

## Figures expressed as a ratio of gross domestic product

At the end of each financial year, while data for current budget deficit, net investment and net borrowing for the final quarter of the financial year (January to March) are available, gross domestic product (GDP) for the corresponding period is not. To enable us to publish estimates of these figures as ratios of GDP for the latest full financial year, the final quarter of the GDP denominator is estimated based on forecasts produced by the Office for Budget Responsibility (OBR).

This estimate of GDP will be used in the March, April and May publications and revised in the June publication when the published value of GDP becomes available.

## Further details on classification decisions and data changes that impact on this (and future) publications

## **Green Investment Bank**

On 20 April 2017, [the government announced](#) the sale of Green Investment Bank (GIB plc) to Macquarie Group Limited. The sale is expected to complete in around 2 months. The implications of this sale on public sector finances will be announced in due course.

## **Diverted Profits Tax**

As of March 2017, total Corporation Tax includes Diverted Profits Tax (DPT). Although these are different taxes, they have been combined to prevent the publication of disclosive taxpayer information.

## **Blue Book 2017**

In September 2017, the public sector finances will incorporate methodological improvements being implemented for the annual UK National Accounts publication, the Blue Book 2017. These improvements will include updated estimates for gross fixed capital formation (GFCF), specifically with regard to estimates for the cost of transfer of fixed assets (such as legal costs incurred at point of sale of a property) and the net acquisition of entertainment, literary and artistic originals (such as film and TV recordings).

The first of these improvements will not impact the fiscal aggregates for the financial year ending March 2015 onwards (either net investment or net borrowing), as public sector data sources already include expenditure on costs of transfer. There will be revisions for earlier financial years as a result of removing existing negative estimates of transfer costs.

The second of these improvements is expected to impact the public corporations sub-sector by both increasing net investment and decreasing current budget deficit by equal and offsetting amounts (expected to be less than £0.5 billion) in recent years, with no impact, therefore, on public sector net borrowing. It will not impact general government estimates.

We have published an article [National Accounts articles: Impact of Blue Book 2017 changes on current price gross domestic product estimates, 1997 to 2012](#) explaining these methodological improvements in more detail.

## **Supporting documentation**

Documentation supporting this publication is available in appendices to the bulletin.

- Appendix A – [Public Sector Finances Tables 1 to 10](#)
- Appendix B – [Large impacts on public sector fiscal measures excluding financial intervention \(one off events\)](#)
- Appendix C – [Revisions analysis on several main components of the central government account \(current receipts, current expenditure, net borrowing and net cash requirement\)](#)
- Appendix D – [Public sector current receipts table](#)
- Appendix E – [Impact of the reclassification of housing associations into the public sector: the financial year ending March 2009 to the financial year ending March 2017](#)
- Appendix F – [Supplementary fiscal measures](#)
- Appendix G – [Revisions to the first reported estimate of financial-year-end public sector net borrowing \(excluding public sector banks\) by sub-sector](#)

## Public sector borrowing by sub-sector

Each month, at 9.30am on the working day following the public sector finances statistical bulletin, we publish [Public sector finances borrowing by sub-sector](#). This release contains an extended breakdown of public sector borrowing in a matrix format and also estimates of Total Managed Expenditure (TME).

1 Unless otherwise stated

2 Current Budget Deficit is the difference between current expenditure and current receipts

3 Net Investment is investment less depreciation

4 Net Borrowing is Current Budget Deficit less Net Investment

5 APF - Bank of England Asset Purchase Facility

6 SLS - Special liquidity Scheme

7 This ratio employs a 12 month centred moving average of GDP

8 Change measured in percentage points

Relationship between columns: 1=2+4+7 ; 10=2+3+6+9 ; 12=10+11

GGNCR (series RUUI) =1+5

1 Previously known as the borrowing requirement of the sector concerned

2 Includes Bank of England Asset Purchase Facility Fund and Special Liquidity Scheme. Figures derived from Bank of England accounts and ONS estimates

Figures for most recent months are ONS estimates

3 Excluding public sector banks

4 NCR = Net Cash Requirement

# PSA7C Central Government Net Cash Requirement

Relationships between columns 1+3+4=5 ; 2+3+4=6 ; 6+7+8=5

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley.

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

# PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

Relationships between columns 1+6+7+8; 9+10+11=12; 12-8=13

1 Comprises payments into the Consolidated Fund and all payovers of NICs excluding those for Northern Ireland.

2 Income tax includes capital gains tax and is gross of any tax credits treated by HM Revenue and Customs as tax deductions.

3 UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.

4 Payments into Consolidated Fund.

5 Including some elements of expenditure not separately identified.

6 Mainly comprises privatisation proceeds.

7 Net of certain receipts, and excluding on-lending to local authorities and public corporations.

8 A much more detailed breakdown of tax receipts is available from HM Revenue and Customs at [www.hmrc.gov.uk/statistics/receipts.htm](http://www.hmrc.gov.uk/statistics/receipts.htm).

Relationship between columns 14=1+2+3+4+5+6+7+8+9+10+11+12

1 Excluding Northern Rock Asset Management (NRAM), Bradford & Bingley (B&B) and Network Rail (NR) - although cash flows relating to NRAM and B&B are included from October 2014 and for NR from April 2015

2 All adjustments reflect differences between when, and at what value, liabilities and assets are scored in net debt and their related cash flows

3 Includes gilts that are transferred to central government (such as those previously held by the Royal Mail Pension Plan) as well as timing differences where cash flows and debt movements were recorded in adjacent months

4 Includes the impact of imputed finance leases as well as the reclassifications of London Continental Railway and the reorganisation of the Housing Revenue Account
