Release date:

16 November 2022

Next release:

14 December 2022

Correction

16 November 2022 15:00

The record for the housing and household services division of the Consumer Prices Index including owner occupiers' housing (CPIH) annual inflation rate was incorrectly stated as being the highest on record, including the modelled estimates. This has been corrected. We apologise for any inconvenience caused.

1 . Main points

- The Consumer Prices Index including owner occupiers' housing costs (CPIH) rose by 9.6% in the 12 months to October 2022, up from 8.8% in September 2022.
- The largest upward contributions to the annual CPIH inflation rate in October 2022 came from housing and household services (principally from electricity, gas, and other fuels), food and non-alcoholic beverages, and transport (principally motor fuels).
- On a monthly basis, CPIH rose by 1.6% in October 2022, compared with a rise of 0.9% in October 2021.
- The Consumer Prices Index (CPI) rose by 11.1% in the 12 months to October 2022, up from 10.1% in September 2022.
- On a monthly basis, CPI rose by 2.0% in October 2022, compared with a rise of 1.1% in October 2021.
- Despite the introduction of the government's [Energy Price Guarantee](#), gas and electricity prices made the largest upward contribution to the change in both the CPIH and CPI annual inflation rates between September and October 2022.
- Rising food prices also made a large upward contribution to change with transport (principally motor fuels and second-hand car prices) making the largest, partially offsetting, downward contribution to the change in the rates.

Note: The Office for National Statistics completed its [classification review of the Energy Price Guarantee \(EPG\) and Energy Bill Relief Scheme](#) in October 2022. We concluded that the EPG will influence the prices that domestic consumers are charged for each unit of gas or electricity, and these reduced prices will be used in compiling the measures of consumer price inflation ([see Section 8](#)).

CPIH, OOH component and CPI annual inflation rates for the last 10 years, UK, October 2012 to October 2022

Source: Office for National Statistics – Consumer price inflation

The Consumer Prices Index including owner occupiers' housing costs (CPIH) rose by 9.6% in the 12 months to October 2022, up from 8.8% in September 2022. The annual inflation rate was last higher in the constructed historical estimates in December 1980, when it stood at 9.8%. On a monthly basis, CPIH rose by 1.6% in October 2022, compared with a rise of 0.9% in the same month a year earlier.

The Consumer Prices Index (CPI) rose by 11.1% in the 12 months to October 2022, up from 10.1% in September 2022. In October 2022, the CPI annual inflation rate was the highest annual CPI inflation rate in the National Statistic series, which began in January 1997. Indicative [modelled consumer price inflation estimates](#) suggest that the CPI rate would have last been higher in October 1981, where the estimate for the annual inflation rate was 11.2%.

The CPI monthly rate was 2.0% in October 2022, compared with 1.1% in October 2021. This means that, between September and October 2022, the prices of goods and services bought or consumed by UK households have increased by 2.0%. This matched the annual CPI inflation rate in July 2021, meaning prices rose between September and October 2022 by as much as they did in the entire year to July 2021.

The largest contribution to the annual rate in October 2022 for both CPIH and CPI came from housing and household services. Other large contributions came from food and non-alcoholic beverages, and from transport.

Despite the introduction of the government's Energy Price Guarantee, gas and electricity prices made the largest upward contribution to the change in both the CPIH and CPI annual inflation rates between September and October 2022. The second largest upward contribution to the change came from rising food prices, while transport (principally motor fuels and second-hand cars) made the largest offsetting downward contribution. We consider these movements in more detail in [Section 3](#).

The main drivers of the annual inflation rate for CPIH and CPI are the same where they are common to both measures. However, the owner occupiers' housing costs (OOH) component accounts for around 17% of the CPIH, and it is the main driver for differences between the CPIH and CPI inflation rates. This makes CPIH our most comprehensive measure of inflation, and it is covered in more detail in [Section 4](#) in this bulletin, while [Section 5](#) provides commentary on the CPI.

3 . Notable movements in prices

The increase to the annual inflation rate in October 2022 reflected, principally, the changes to the cost of domestic energy supplies. There were also increases from rising food and non-alcoholic beverage prices, and from items for recreation and culture. There were large, partially offsetting, downward effects from the transport section, more specifically from the price of motor fuels and second-hand cars.

Table 2: CPIH annual and monthly inflation rates by division
UK, October 2021, September 2022 and October 2022

	CPIH 12-month rate		CPIH 1-month rate	
	September 2022	October 2022	October 2021	October 2022
CPIH All items	8.8	9.6	0.9	1.6
Food and non-alcoholic beverages	14.6	16.4	0.5	2.0
Alcohol and tobacco	5.6	6.2	-0.5	0.0

Source: Office for National Statistics - Consumer price inflation

Housing and household services

Overall, the cost of housing and household services rose 11.7% in the 12 months to October 2022, up from 9.3% in September 2022. The annual inflation rate was last higher in March 1991, when it stood at 12.5%.

This increase followed the introduction of the government's Energy Price Guarantee (EPG), which will be in place from 1 October 2022 until 31 March 2023. Energy prices rose for households in Great Britain, however, the rise was constrained by fixing the unit cost of electricity and gas. Under the EPG, the average unit cost (for a customer with typical usage, paying by direct debit) of gas rose from 7.8 pence per kilowatt hour (p/kWh) to 10.3 p/kWh, and electricity rose from 27.2 p/kWh to 34.0 p/kWh. However, without the EPG, the average unit prices for gas and electricity were expected to rise to 14.8 p/kWh and 51.9 p/kWh, respectively.

The average standing charges for customers on default tariffs will remain capped in line with the levels set (in Great Britain) by Ofgem for the default tariff cap from 1 October 2022, at 46p per day for electricity and 28p per day for gas, for a typical dual fuel customer paying by direct debit. It was forecast that a typical UK household will now pay up to an average £2,500 a year under the EPG. The introduction of the EPG meant that overall electricity, gas and other fuels prices rose by 24.3% between September and October 2022, with gas prices rising by 36.9% and electricity prices by 16.9%. As an indicative estimate, without the implementation of the EPG, electricity, gas and other fuels prices would have risen by nearly 75% between September and October 2022 (instead of 24%). This would have increased the contribution to the 12-month inflation rate from electricity, gas and other fuels from 2.59 percentage points to nearly 4.8 percentage points, taking the October 2022 headline rate for CPIH up to approximately 11.8%.

In October 2022, households are paying, on average, 88.9% more for their electricity, gas, and other fuels than they were paying a year ago. Domestic gas prices have seen the largest increase, with prices in October 2022 being more than double the price a year earlier. The prices for liquid fuels and for electricity have risen by 70.0% and 65.7%, respectively, in the year to October 2022.

We have also noted increases to the price of solid fuels (including smokeless fuels). The prices for this item tend not to increase from year to year but, since the start of the year, we have seen notable increases, with prices in October 2022 being 36.4% higher than a year ago, perhaps because of households seeking alternative forms of heating.

Food and non-alcoholic beverages

Food and non-alcoholic beverage prices rose by 16.4% in the 12 months to October 2022, up from 14.6% in September 2022. The annual rate of inflation for this category has continued to rise for the last 15 consecutive months, from negative 0.6% in July 2021. The current rate is estimated to be the highest since September 1977, when the food and non-alcoholic beverages annual inflation rate was 17.6%, as presented in the consumer price inflation [extended historic series](#).

Figure 2: Food and non-alcoholic beverage annual inflation rose for 15 consecutive months

CPIH, and food and non-alcoholic beverages annual inflation rates, UK, October 2012 to October 2022

Figure 2: Food and non-alcoholic beverage annual inflation rose for 15 consecutive months

CPIH, and food and non-alcoholic beverages annual inflation rates, UK, October 2012 to October 2022

Source: Office for National Statistics – Consumer price inflation

The increase in the annual rate for food and non-alcoholic beverages between September and October 2022 was driven by price movements across 10 of the 11 more detailed classes. The largest upward effect came from milk, cheese, and eggs, where prices for shop-bought milk and cheddar cheese rose between September and October 2022 but by more than between the same two months in 2021.

Overall prices for food and non-alcoholic beverages have risen throughout 2022. Despite prices rising more slowly (by 1.1%) between August and September 2022, there was a resurgence in the monthly increase between September and October 2022; prices increased by 2.0%, which is the second monthly increase of 2% or more this year.

Recreation and culture

There was an overall upward contribution of 0.06 percentage points to the change in the annual inflation rate from the recreation and culture section. The largest upward contribution (of 0.06 percentage points) came from audio-visual equipment and related products, principally recording media. Price movements for some recording media items can sometimes be large, in part depending on the composition of bestseller charts, so short-term movements need to be interpreted with caution.

There were smaller upward contributions from cultural services and books, where prices overall rose between September and October 2022, but fell between the same two months in 2021. These upward contributions were partially offset by a downwards effect from across the other recreational items, garden and pets grouping, where prices overall fell between September and October 2022 but rose between the same two months in 2021.

Transport

The annual inflation rate for transport was 9.3% in October 2022, down for a fourth consecutive month from a peak of 15.2% in June 2022. Prices were unchanged between September and October 2022 but had increased by 1.5% in 2021. This resulted in a 0.18 percentage point downward contribution to the change in the annual inflation rate.

Figure 3: Transport inflation rate further eases in October 2022

CPIH, transport and motor fuels annual inflation rates, UK, October 2012 to October 2022

Figure 3: Transport inflation rate further eases in October 2022

CPIH, transport and motor fuels annual inflation rates, UK, October 2012 to October 2022

Source: Office for National Statistics – Consumer price inflation

Unlike recent months, where the downward movement in the transport division has been dominated by falling motor fuel prices, in October 2022, there were large downward effects from both motor fuels (a downward contribution of 0.09 percentage points) and second-hand cars (0.07 percentage points)

Overall, fuel prices fell by 0.5% between September and October 2022 but prices at the pump were still 22.2% more expensive than they were in October 2021. For the individual fuel types, the movements for petrol and diesel were noticeably different.

Average petrol and diesel prices stood at 163.6 and 183.9 pence per litre, respectively, in October 2022, compared with 138.6 and 142.2 pence per litre a year earlier. While prices remain higher than a year ago, petrol prices fell by 2.9 pence per litre on the month while diesel prices rose by 2.3 pence per litre. This has resulted in a notable 20.3 pence per litre difference between diesel and petrol prices – the largest difference since our recorded series began in 2004. Anecdotally, this could be a consequence of a surge in global demand for diesel for electricity production.

The price of second-hand cars fell by 0.6% between September and October 2022, compared with a 4.6% rise in prices between the same months in 2021. Prices had risen significantly between May and November 2021 because of increased demand following the coronavirus (COVID-19) pandemic, lower levels of second-hand car stock, and the global semiconductor microchip shortage. This month's fall in prices meant they fell below the level of last October. This is the first month since before the pandemic that second-hand car prices have been cheaper than they were a year ago.

4 . Latest movements in CPIH inflation

Figure 4: Rising energy costs drive CPIH goods inflation rate increase

CPIH goods, services and core annual inflation rates for the last 10 years, UK, October 2012 to October 2022

Figure 4: Rising energy costs drive CPIH goods inflation rate increase

CPIH goods, services and core annual inflation rates for the last 10 years, UK, October 2012 to October 2022

Source: Office for National Statistics – Consumer price inflation

Figure 4 shows the annual inflation rates for the Consumer Prices Index including owner occupiers' housing costs (CPIH) all goods and all services series, together with CPIH excluding energy, food, alcohol and tobacco (often referred to as core CPIH). The CPIH inflation rate is added for comparison.

The introduction of the government's Energy Price Guarantee on 1 October 2022 has contributed to the 2.9% increase to the CPIH goods inflation rate between September and October 2022. The CPIH goods annual inflation rate increased to 14.8%, from 13.2% in September 2022. This is the highest rate on record, while both CPIH services and core CPIH inflation remain at their highest rate since March 1993 and March 1992, respectively.

The services and core CPIH annual inflation rates were unchanged in October 2022 at 5.3% and 5.8%, respectively. Between September and October 2022, CPIH services rose by 0.5% in the month, compared with an increase of 0.4% in October 2021, while CPIH core inflation rose by 0.6%, which is the same monthly increase as in October 2021.

Figure 5: Rising domestic fuel prices dominate the change to the CPIH annual rate

Contributions to change in the annual CPIH inflation rate, UK, between September and October 2022

Figure 5: Rising domestic fuel prices dominate the change to the CPIH annual rate

Contributions to change in the annual CPIH inflation rate, UK, between September and October 2022

Source: Office for National Statistics – Consumer price inflation

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each group can be found in Table 3 in the accompanying [Consumer price inflation dataset](#).

Figure 5 shows how each of the main groups of goods and services contributed to the change in the annual CPIH inflation rate between September and October 2022. To understand what has changed the inflation rate between these months, we can look at the differences between the contributions made by the groups to the rate in September 2022 and the rate in October 2022. Summing the contributions to change across the 12 divisions results in the change to the annual CPIH rate between the latest two months, that is, the rise from 8.8% to 9.6%.

The increase to the annual CPIH rate into October 2022 was driven by upward contributions from 7 of the 12 divisions but was dominated by the notable upward contribution (of 0.74 percentage points) coming from gas and electricity prices. There were further large upward contributions from food and non-alcoholic beverages (0.15 percentage points), and recreation and culture (0.06 percentage points). There was a partially offsetting, large downward contribution from the transport division (0.18 percentage points), principally from motor fuels and second-hand cars.

Figure 6: Contributions to the CPIH annual rate from housing and household services rise

Contributions to the annual CPIH inflation rate, UK, October 2020 to October 2022

Figure 6: Contributions to the CPIH annual rate from housing and household services rise

Contributions to the annual CPIH inflation rate, UK, October 2020 to October 2022

Source: Office for National Statistics – Consumer price inflation

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each group can be found in Table 3 in the accompanying [Consumer price inflation dataset](#).

Figure 6 shows the extent to which the distinct categories of goods and services have contributed to the overall annual CPIH inflation rate over the past two years. The contribution of lower-level spending categories to the annual rate depends on both the price movement in those categories as well as their weight. Contributions help to understand what is driving the inflation rate by expressing it as the additive sum of its parts. For any one month, when added together, the contributions from the 12 divisions sum to the overall CPIH inflation rate, for example, 9.6% in October 2022.

The largest upward contributions to the annual CPIH inflation rate in October 2022 came from housing and household services (principally from electricity, gas, and other fuels), food and non-alcoholic beverages, and transport. Contributions from these three divisions accounted for 6.2 percentage points, which is nearly two-thirds of the annual CPIH inflation rate compared with just over half the expenditure in the CPIH basket.

There was a further increase of 0.15 percentage points to the contribution to the annual CPIH inflation rate from food and non-alcoholic beverages between September and October 2022. The contribution from the transport division fell by 0.18 percentage points, taking its contribution to the annual CPIH inflation rate down to 1.02 percentage points.

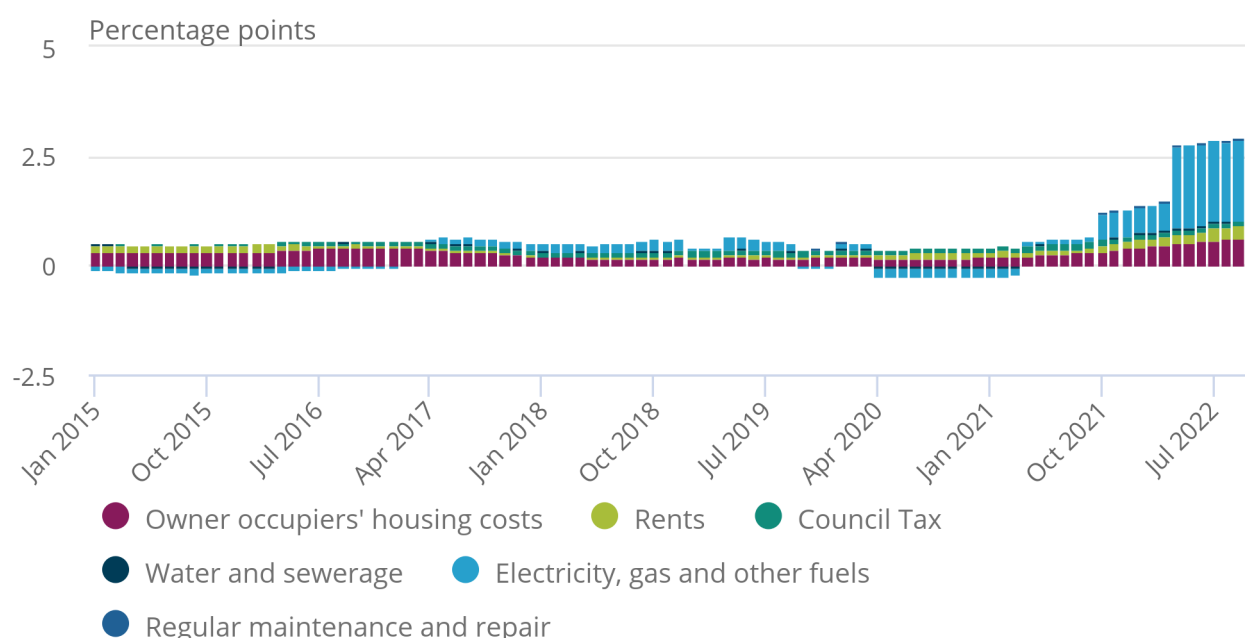

The contributions from housing and household services (3.68 percentage points), and food and non-alcoholic beverages (1.48 percentage points), which have both increased between September and October 2022, are the largest since the start of the National Statistics series in 2006.

Figure 7: There was a three-quarters of a percentage point increase to the contribution from housing components in October 2022

Contributions of housing components to the annual CPIH inflation rate, UK, January 2015 to October 2022

Figure 7: There was a three-quarters of a percentage point increase to the contribution from housing components in October 2022

Contributions of housing components to the annual CPIH inflation rate, UK, January 2015 to October 2022

Source: Office for National Statistics – Consumer price inflation

Notes:

1. Individual contributions may not sum to the total because of rounding.

The Consumer Prices Index (CPI) differs from the CPIH in that it does not include owner occupiers' housing costs (OOH) and Council Tax. Figure 7 shows the contribution of these components to the annual CPIH inflation rate in the context of wider housing-related costs. In October 2022, the contribution of housing and household services in total to the annual CPIH inflation rate was 3.68 percentage points, up from 2.94 percentage points in September 2022. The October figure was the highest in the National Statistic series, which began in January 2006.

The relatively high contribution to the rate since April 2022 came mainly from electricity, gas, and other fuels. This reflects price rises for gas and electricity following the increase in the Office of Gas and Electricity Markets (Ofgem) cap on energy prices on 1 April 2022 and follows an earlier rise in the price cap on 1 October 2021.

From 1 October 2022, the Ofgem energy price cap was replaced with the government's [Energy Price Guarantee \(EPG\)](#). The EPG will be in place until 31 March 2023. Under the EPG, energy prices increased. However, the rate of increase was reduced by limiting the unit cost of electricity and gas so that a typical household in Great Britain pays, on average, around £2,500 a year on their energy bill.

On 31 October 2022, we made an announcement following the completion of our [classification review of the Energy Price Guarantee and Energy Bill Relief Scheme](#). We concluded the EPG will influence the prices that domestic consumers are charged for each unit of gas or electricity, and these reduced prices will be used in compiling the measures of consumer price inflation ([see Section 8](#)).

Between September and October 2022, gas and electricity prices rose by 36.9% and 16.9%, respectively. Gas prices rose by 128.9% and electricity prices by 65.7% in the 12 months to October 2022, leading to a 2.59 percentage point contribution to the annual inflation rate from electricity, gas, and other fuels in total.

The contribution to the annual rate from Council Tax remains unchanged at 0.10 percentage points in October 2022. This reflects an annual rate of 3.4%.

5 . Latest movements in CPI inflation

While the Consumer Prices Index including owner occupiers' housing costs (CPIH) is our lead and most comprehensive measure of consumer price inflation, the Consumer Prices Index (CPI) is based on a harmonised methodology developed by Eurostat and allows for international comparisons to be drawn. For more information on the use cases for our consumer price inflation statistics, please refer to our [Measuring changing prices and costs for consumers and households, proposed updates: March 2020 article](#).

Table 3: CPI annual and monthly inflation rates by division
UK, October 2021, September 2022 and October 2022

	CPI 12-month rate		CPI 1-month rate	
	September 2022	October 2022	October 2021	October 2022

Figure 9: Rising gas and electricity prices push up CPI annual inflation

Contributions to change in the annual CPI inflation rate, UK, between September and October 2022

Source: Office for National Statistics – Consumer price inflation

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each group can be found in Table 4 in the accompanying [Consumer price inflation dataset](#).

Figure 9 shows how each of the main groups of goods and services contributed to the change in the annual CPI inflation rate between September and October 2022.

Like CPIH, the rise in the annual CPI rate into October 2022 was driven by contributions from 7 of the 12 divisions. The largest upward contributions to the change in the annual inflation rate came from housing and household services (0.93 percentage points), food and non-alcoholic beverages (0.18 percentage points), and recreation and culture (0.07 percentage points).

The introduction of the EPG meant that overall electricity, gas and other fuels prices rose by 24.7% between September and October 2022, with gas prices rising by 36.9% and electricity prices by 16.9%, however the increases would have been notably higher without the EPG's introduction.

As an indicative estimate, without the implementation of the EPG, electricity, gas and other fuels prices would have risen by nearly 75% between September and October 2022 (instead of 25%). This would have meant that the upward contribution to the change in the annual CPI inflation rate from housing and household services would have increased to approximately 3.7 percentage points, instead of 0.93 percentage points, taking the CPI annual inflation rate up to approximately 13.8%.

These upward contributions were partially offset by a large downward contribution (of 0.23 percentage points) from transport, coming from motor fuels (0.12 percentage points) and second-hand cars (0.10 percentage points).

Figure 10: CPI inflation rate driven by housing and household services, food and non-alcoholic beverages, and transport

Contributions to the annual CPI inflation rate, UK, October 2020 to October 2022

Figure 10: CPI inflation rate driven by housing and household services, food and non-alcoholic beverages, and transport

Contributions to the annual CPI inflation rate, UK, October 2020 to October 2022

Source: Office for National Statistics – Consumer price inflation

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each group can be found in Table 4 in the accompanying [Consumer price inflation dataset](#).

Figure 10 shows the extent to which the distinct categories of goods and services have contributed to the overall annual CPI inflation rate over the last two years.

While the CPIH includes extra housing components not included in the CPI, the largest contributions to the annual CPI inflation rate were from the same divisions that made the largest contributions to the annual CPIH rate, namely housing and household services, transport, and food and non-alcoholic beverages.

Figure 11 illustrates CPI inflation against the Group of Seven (G7) countries that produce a comparable measure.

Figure 11: Across G7 countries, Italian and French inflation is increasing faster than the UK rates

CPI compared with selected G7 annual inflation rates, October 2012 to October 2022

Figure 11: Across G7 countries, Italian and French inflation is increasing faster than the UK rates

CPI compared with selected G7 annual inflation rates, October 2012 to October 2022

Source: Office for National Statistics – Consumer price inflation, Eurostat – Harmonised Index of Consumer Prices (HICP)

Notes:

1. October 2022 estimates for France, Germany and Italy are flash estimates and are not final; the final HICP data for October 2022 are published on Thursday 17 November 2022.
2. There are some differences in the definition of the US HICP that may limit comparison; for more information, please refer to [Comparing US and European inflation: the CPI and the HICP](#).
3. The [US CPI for All Urban Consumers \(CPI-U\)](#) provides a monthly measure of US inflation although its coverage is notably different from the HICP methodology.

6 . Consumer price inflation data

[Consumer price inflation tables](#)

Dataset | Released 16 November 2022

Measures of monthly UK inflation data including the Consumer Prices Index including owner occupiers' housing costs (CPIH), Consumer Prices Index (CPI) and Retail Prices Index (RPI). These tables complement the consumer price inflation time series dataset.

[Consumer price inflation time series](#)

Dataset MM23 | Released 16 November 2022

Comprehensive database of time series covering measures of inflation data for the UK including the CPIH, CPI and RPI.

[Consumer price inflation detailed briefing note](#)

Dataset | Released 16 November 2022

The consumer price inflation detailed briefing note contains details of the items contributing to the changes in the CPIH (and RPI), details of any notable movements, a summary of the reconciliation of CPIH and RPI, and the outlook, which looks ahead to next month's release.

7 . Glossary

Annual inflation rate

The most common approach to measuring inflation is the 12-month or annual inflation rate, which compares prices for the latest month with the same month a year ago. In any given month, the annual rate is determined by the balance between upward and downward price movements of the range of goods and services included in the index.

Consumer price inflation

Consumer price inflation is the rate at which the prices of goods and services bought by households rise or fall. It is estimated by using price indices. For an overview of the indices and their uses, please see our [Consumer price indices, a brief guide: 2017 article](#).

Consumer Prices Index including owner occupiers' housing costs (CPIH)

CPIH is the most comprehensive measure of inflation. It extends the Consumer Prices Index (CPI) to include a measure of the costs associated with owning, maintaining and living in one's own home, known as owner occupiers' housing costs (OOH), along with Council Tax. Both are significant expenses for many households and are not included in the CPI.

Consumer Prices Index

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. The CPI is the inflation measure used in the government's target for inflation.

The CPI is produced at the same level of detail as the CPIH in the [accompanying dataset](#) and accompanying [data time series](#).

Retail Prices Index (RPI)

RPI does not meet the required standard for designation as a [National Statistic](#). In recognition that it continues to be widely used in contracts, we continue to publish the RPI, its subcomponents and RPI excluding mortgage interest payments (RPIX). To view the all-items RPI, please see the [data time series section of the inflation and price indices area of our website](#). The annual RPI inflation rate was 14.2% in October 2022.

The UK Statistics Authority and HM Treasury launched a consultation in 2020 on the authority's proposal to address the shortcomings of the RPI. From 2030 (at the earliest), as outlined in [the UK Statistics Authority response to the consultation](#), the CPIH methods and data sources will be introduced into the RPI. Additionally, the supplementary and lower-level indices of the RPI will be discontinued.

8 . Measuring the data

Assessment of the Energy Price Guarantee and the Energy Bill Relief Scheme

On 31 October 2022, the Office for National Statistics (ONS) published the conclusion of its [classification review of the Energy Price Guarantee \(EPG\)](#) for domestic consumers, and the Energy Bill Relief Scheme (EBRS) for non-domestic consumers, in the context of international statistical guidance.

The payments under these schemes will be classified as subsidies on products, paid by central government to the energy suppliers in the non-financial corporations sector in the UK. The implication of the classification decision for consumer price inflation is that the EPG influences the prices that domestic consumers are charged for a unit of gas or electricity. It is these reduced unit prices that will be used in compiling the Consumer Prices Index including owner occupiers' housing costs (CPIH), Consumer Prices Index (CPI) and Retail Prices Index (RPI), which will therefore be lower while the schemes are in operation than if the EPG had not been introduced.

Treatment of the Energy Bills Support Scheme (EBSS)

On 3 February 2022, the UK government announced an [Energy Bills Rebate](#) package to help households to manage rising energy bills. On 26 May 2022, the UK government announced an additional [cost of living support package](#). These packages included:

- a £150 non-repayable Council Tax rebate payment for all households that are liable for Council Tax in Bands A to D in England
- a £400 payment to support households with their energy bills through the Energy Bills Support Scheme

Decisions on whether to include rebates, subsidies and discounts in our consumer price inflation statistics are not clear cut and are taken on a case-by-case basis. We aim to be consistent with the national accounts, the public sector finances and other economic statistics. Decisions are based on international statistical guidance and practical considerations. More information on this is provided in Section 9.2 of our [Consumer Price Indices Technical Manual](#). We have previously announced that the Council Tax rebate is out of scope of the Consumer Prices Index including owner occupiers' housing costs (CPIH) and Retail Prices Index (RPI). Council Tax is not included in the Consumer Prices Index (CPI).

The ONS [classifications assessment of the EBSS and its treatment in consumer price indices](#) was announced on 31 August 2022. The EBSS has been classified as a current transfer paid by central government to the households sector. As such, the transfers increase household income rather than reduce household expenditure. The implication of this decision, and in line with the ONS's previous decision on the classification of the Council Tax rebate, is that the EBSS is not part of household expenditure and will therefore be treated as out of scope of the consumer price indices.

Treatment of Council Tax rebate

In April 2022, a £150 non-repayable Council Tax rebate payment was provided to all households that are liable for Council Tax in Bands A to D in England. There was also further funding available for households that need support but are not eligible for this rebate, and for the devolved countries to administer to households in Wales, Scotland, and Northern Ireland. This rebate was out of scope of CPIH and therefore not reflected in the figures.

CPIH-consistent inflation rate estimates for UK household groups: July to October 2022

Every quarter, we publish experimental estimates of inflation rates for different types of households on a CPIH-basis, including for example inflation rates for households in different income deciles, different types of tenure, and retirement status. [Today's publication](#) includes monthly data for Quarter 3 (July to Sept) 2022. For this publication, we have additionally extended the time period to incorporate the latest October estimates, as well as producing subgroup estimates on a CPI basis, which brings up to date our [analysis from January 2022](#). The data release is supported by the [Inflation and the cost of living for household groups: October 2022](#) article.

Analysis of lowest-cost grocery items

On 25 October 2022, we published [our experimental analysis of price changes for a sample of lowest-cost grocery items](#), which provided an update to analysis previously published in May 2022. The analysis uses in-house web-scraped data to investigate the price movements for a sample of 30 everyday grocery items (including pasta, rice, milk, and so on), which are commonly bought by households on low incomes.

For each item, we have investigated the change in price of the cheapest product available in online shops up to September 2022.

Personal inflation calculator

To assist individuals in understanding how the rise in inflation affects their expenditure, we have produced a [personal inflation calculator](#). The calculator allows users to enter the amount they spend across either a reduced or a wide range of categories, to produce an estimate of their personal inflation based on those spending patterns.

If you have any questions or comments on the inflation calculator, please email cpi@ons.gov.uk.

Consumer price inflation historical estimates, UK, 1950 to 1988

On 18 May 2022, we published the [Consumer price inflation, historical estimates, UK, 1950 to 1988 – methodology](#). This includes new estimates of CPIH over the period, and improved estimates of CPI. These estimates (published in response to user need for a longer series) are indicative and are for analytical purposes only. They are not intended for official use and do not constitute part of the National Statistic series.

Previously, in December 2018, we published a CPIH historical series covering the period from 1989 to 2005 in the [Consumer Prices Index including owner occupiers' housing costs \(CPIH\) historical series: 1988 to 2004 article](#). This series is an official statistic rather than a National Statistic, reflecting the historical uncertainty around the back casts.

Weights for consumer price inflation statistics

In line with usual practice, the expenditure weights used in compiling the CPIH and CPI will be updated at the start of 2023. Normally the weights would be updated using the latest Blue Book-consistent household final consumption expenditure (HFCE) dataset, which is lagged by two years. The unprecedented events of the last few years have meant we have adjusted expenditure feeding into the weights update to incorporate some of the larger changes seen in spending patterns, so they are more reflective of the year immediately prior to use in consumer inflation. More information on these adjustments can be found in [Section 2 of our Consumer price inflation, updating weights: 2022 article](#).

We are considering the most suitable approach to use for the forthcoming 2023 update of expenditure weights. In particular, this will take into account any continued, large shifts in consumer spending along with international guidance and best practice. We will aim to announce our agreed approach for the update of 2023 consumer inflation weights in the November 2022 release, to be published on 14 December 2022 subject to the publication of international guidance.

Methodology information

The consumer price indices are normally based on prices collected from outlets around the country, supplemented by information collected centrally over the internet and by phone. The figures in this publication use data collected on or around 11 October 2022.

Our [Consumer price indices, a brief guide](#) article gives an overview of consumer price statistics, while our [Consumer Prices Indices Technical Manual](#) covers the concepts and methodologies underpinning the indices in more detail.

Our [CPIH Compendium](#) provides a comprehensive source of information on the CPIH, focusing on the approach to measuring owner occupiers' housing costs.

Our [Users and uses of consumer price inflation statistics: July 2018 update](#) methodology article includes information on the users and uses of these statistics, and the characteristics of the different measures of inflation in relation to potential use.

9 . Strengths and limitations

We have illustrated our [future approach to measuring changing prices and costs faced by consumers and households](#) using three "use cases", along with how they relate to the measures currently published and those under development. We have also published proposed updates in our [Measuring changing prices and costs for consumers and households, proposed updates: March 2020 article](#).

The three cases refer firstly to the Consumer Prices Index including owner occupiers' housing costs (CPIH) as our lead measure of inflation based on economic principles. They also refer to the Household Costs Indices (HCIs) as a set of measures to reflect the change in costs as experienced by households and the Retail Prices Index (RPI) as a legacy measure that is required to meet existing user needs. Our [Shortcomings of the RPI as a measure of inflation article](#) describes the issues with the RPI.

Key: - zero or negligible

1 From the release of January consumer price inflation data on 16 February 2016, CPIH and CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at <http://www.statisticsauthority.gov.uk/>.

3 The series CPIY, CPI-CT and CPIHY were discontinued in January 2022, with the final estimates referring to price change in the period December 2021.

¹ As a direct result of the reduced availability of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of quotes used in February 2020 (the most recent 'normal' collection). To identify which series are affected please consult

the latest Consumer price inflation tables which can be located here: <https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/consumer-priceinflation>, which includes notation to reflect the reduced coverage.

¹ As a direct result of the reduced availability of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of quotes used in February 2020 (the most recent 'normal'

collection). To identify which series are affected, please consult the latest Consumer price inflation tables which can be located here: <https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/consumer-priceinflation>, which includes notation to reflect the reduced coverage.

1 From the release of January consumer price inflation data on 16 February 2016, CPIH and CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 More detailed CPIH, CPI and RPI data are available at: <http://www.ons.gov.uk>.

1 From the release of January consumer price inflation data on 16 February 2016, CPIH & CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 More detailed CPIH, CPI and RPI data are available at: <http://www.ons.gsi.gov.uk>.

¹ For further information on the composition of the indices shown, see 'The Consumer Prices Index: Goods and Services Indices and Special Aggregates', which can be downloaded from: <http://webarchive.nationalarchives.gov.uk/20160105160709/http://ons.gov.uk/>

² The coverage of this special aggregate has changed extensively since January 2000, when Social protection was first included and extensions to the Education and Health divisions also took effect. Health was further extended with effect from January 2001.

³ Energy includes electricity, gas and other fuels, and fuels and lubricants.

Key: - zero or negligible

1 Comprises 'Electricity, gas and other fuels' (group 04.5) and 'Fuels and lubricants' (class 07.2.2).

2 Comprises all other goods elements of the CPI.

3 For further information on all of these services components, see 'The Consumer Prices Index: Goods and Services Indices and Special Aggregates', which can be downloaded from: <http://webarchive.nationalarchives.gov.uk/20160105160709/http://ons.gov.uk/>

Key: - zero or negligible .. Not available

1 Published as the CPI in the UK.

2 Aggregate for European Union with 27 Member States.

Following user requests, on 10 April 2018 Eurostat began to publish in its database an aggregate for the EU with 27 Member States for around 50 most in-demand indicators, such as population, GDP growth rate and unemployment.

3 Data for the former EU28 aggregate.

For reference periods February 2020 or later, Eurostat no longer calculates or publishes the former EU 28 aggregate. This means that the final time periods for which the EU28 aggregate is published are January 2020, fourth quarter 2019 or the year 2019 depending on the frequency of the dataset. Eurostat will maintain historic data for EU28 in the database and will update as revisions are received.

4 The coverage of the Monetary Union Indices of Consumer Prices (MUICP) was extended to include Greece with effect from Jan 2001 and Slovakia from Jan 2009.

5 Following the end of the transition period, we have ceased to publish the Harmonised Index of Consumer Prices (HICP) international comparisons for EU countries in this table. The international comparisons will continue to be available on the Eurostat website. <https://ec.europa.eu/eurostat/web/main/data/database>

Key: - zero or negligible

1 An error was identified in the dataset underpinning the 2019 RPI weights covering the period February to June 2019. In line with the consumer price inflation statistics revision policy RPI was not revised. The corrected weights have been used for the July 2019 RPI onwards. Users should note there is a discontinuity between June's and July's index levels, which have been calculated using differing weights.

2 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at <http://www.statisticsauthority.gov.uk>.

3 As a direct result of the reduced availability of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of price quotes used in February 2020 (the most recent 'normal' collection). To identify which series are affected, please the latest Consumer price inflation tables which can be found here: <https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/consumerpriceinflation>, which includes notation to reflect the reduced coverage.

4 Index date for October: 11 October 2022

Key: - zero or negligible

1 All components of the RPI are included in the above breakdown with the exception of mortgage interest payments, council tax and depreciation.

2 Including fuel oil.

3 The 'other goods' category comprises DIY materials, coal & solid fuels, household goods, clothing & footwear, personal articles, chemists goods, purchase of motor vehicles and leisure goods.

4 The 'utilities' category comprises water, electricity, gas, postage, telephone charges and rail fares.

5 The 'shop services' category comprises catering, repairs & maintenance charges, domestic services, personal services, maintenance of motor vehicles, TV licence & rentals and entertainment & recreation charges.

6 The 'non-shop services' category comprises dwelling insurance & ground rent, fees and subscriptions, vehicle tax and insurance, bus & coach fares, other travel costs, foreign holidays and UK holidays.

7 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>.

8 An error was identified in the dataset underpinning the 2019 RPI weights covering the period February to June 2019. In line with the consumer price inflation statistics revision policy RPI was not revised. The corrected weights have been used for the July 2019 RPI onwards. Users should note there is a discontinuity between June's and July's index levels, which have been calculated using differing weights.
