

Statistical bulletin

# Producer price inflation, UK: January 2023

Changes in the prices of goods bought and sold by UK manufacturers including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

# 1 . Main points

- Producer input prices rose by 14.1% in the 12 months to January 2023, down from 16.2% in the year to December 2022.
- Producer output (factory gate) prices rose by 13.5% in the 12 months to January 2023, down from 14.6% in the year to December 2022.
- Inputs of crude oil, and petroleum products, provided the largest downward contributions to the change in the annual rates of input and output inflation, respectively.
- On a monthly basis, producer input prices decreased by 0.1% and output prices increased by 0.5% in January 2023.

## 2 . Producer price inflation rates

The annual rate of the input Producer Price Index (PPI) has now been positive for 26 consecutive months, although it has been slowing for the last seven months. The annual rate is now 10.5 percentage points below its record annual high of 24.6% in June 2022 (Figure 1).

The annual rate of the output PPI has now been positive for 25 consecutive months, and has been slowing for six consecutive months. It is down 6.3 percentage points from its recent peak of 19.8% in July 2022.

**Figure 1: Annual input and output PPI inflation rates have continued to slow in January 2023**

### 3 . Input producer price inflation

Producer input prices fell by 0.1% in January 2023, compared with a decrease of 1.1% in December 2022 (Table 1). The monthly rate reached a record high of 5.1% in March 2022.

Table 1: Input prices, index values, inflation rates and percentage point change to the annual inflation rate UK, January 2022 to January 2023

#### All materials and fuels purchased (GHIP)

	PPI Index (2015=100)	Monthly rate	Annual rate	Change in the annual rate (percentage points)
<b>2022 Jan</b>	133.2	1.7	14.7	0.7
<b>Feb</b>	135.4	1.7	15.6	0.9
<b>Mar</b>	142.3	5.1	19.3	3.7
<b>Apr</b>	146.4	2.9	21.5	2.2

#### Notes

1. Rates may not correspond to index value changes because of rounding.

The largest upward contribution to the annual input inflation rate came from metals and non-metallic mineral products, which contributed 3.17 percentage points (Figure 3). This product group saw an increase in the year to January 2023 of 14.2% (Table 2). This is up from 13.6% in December 2022 as global steel prices and energy costs continue to affect the price of these materials.

The second largest contributor to the annual rate in January 2023 came from home food materials, which contributed 2.37 percentage points (Figure 3). Home food materials saw an increase in the year to January 2023 of 18.0%, up marginally from 17.8% in December 2022. Farming costs and energy prices continue to keep the price of home food materials high.

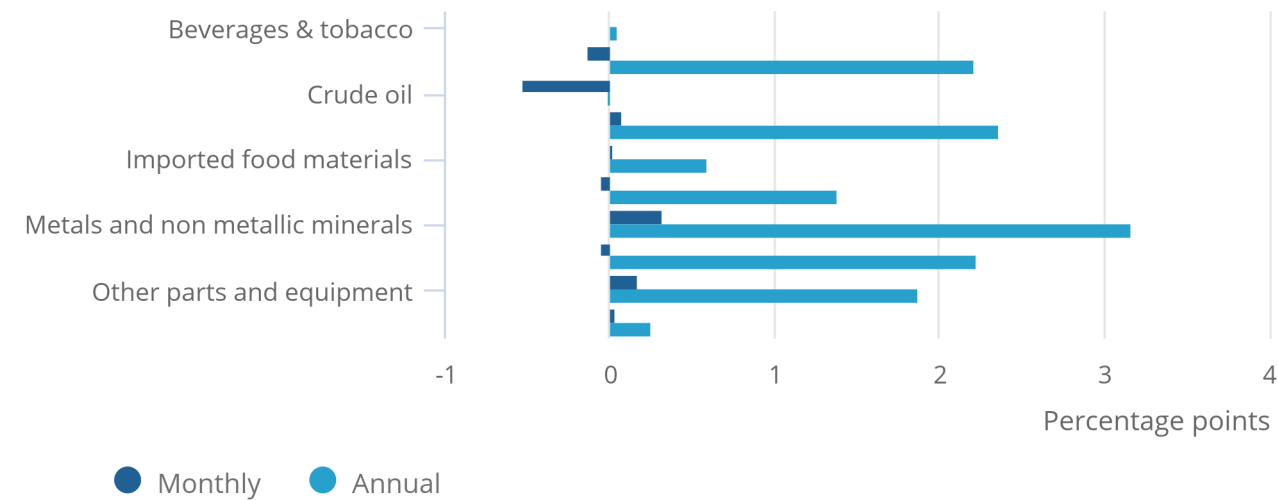

As indicated in our [Classification review of the Energy Price Guarantee and Energy Bill Relief Scheme \(EBRS\) statement](#), the data relating to the inputs of fuel continues to reflect the impact of EBRS.

Notes:

- 1. Contributions to the rate may not add up to the rate exactly because of rounding.

Table 2: Input prices, inflation rates  
UK, December 2022 and January 2023

Product group	Percentage change		Percentage change	
	December 2022		January 2023	
	Monthly rate	Annual rate	Monthly rate	Annual rate
<b>Beverages and tobacco</b>	1.2	11.9	3.2	12.4
<b>Fuel excluding Climate Change Levy</b>	7.1	79.8	-2.5	61.1
<b>Crude oil</b>	-12.8	20.8	-8.7	-0.1
<b>Home food materials</b>	0.8	17.8	0.6	18.0
<b>Imported food materials</b>	0.2	27.0	0.6	25.7
<b>Other produced materials</b>	-2.3	15.3	-0.4	12.9
<b>Metals and non-metallic minerals</b>	-1.0	13.6	1.5	14.2
<b>Chemicals</b>	-0.6	14.9	-0.3	12.5
<b>Other parts and equipment</b>	-0.5	8.1	0.9	9.0
<b>Other inputs</b>	-0.2	8.1	1.2	9.1
<b>All manufacturing</b>	-1.1	16.2	-0.1	14.1

Source: Office for National Statistics – Producer Price Index

Input prices of imported materials and fuels increased by 0.6% in January 2023. This is up from a fall of 2.3% in December 2022 and a fall of 2.4% in November 2022. The annual rate increased by 16.8% in January 2023. This is up slightly from 16.7% in December 2022 but down 7.9 percentage points from its peak of 24.7% in October 2022 (Table 3).

#### Notes

1. Rates may not correspond to index value changes because of rounding.
2. Total imports (GD74) represents roughly one-fifth of overall materials and fuels (input prices) in terms of index weight.

In the year to January 2023, the annual rate of producer input inflation was 14.1%, down 2.1 percentage points from 16.2% in December 2022.

Of the 10 product groups, 5 showed downward contributions to the change in the annual rate, with crude oil providing the largest, at 1.20 percentage points (Figure 4). Crude oil saw a monthly decrease of 8.7% in January 2023, compared with an increase of 10.3% in January 2022.

**Figure 4: Crude oil provided the largest downward contribution to the change in the annual inflation rate of input PPI**

Input Producer Price Index (PPI), contribution to change in the annual inflation rate, UK, January 2023

**Figure 4: Crude oil provided the largest downward contribution to the change in the annual inflation rate of input PPI**

Source: Office for National Statistics – Producer Price Index

Notes:

- 1. Contributions to the rate may not add up to the rate exactly because of rounding.

## 4 . Output producer price inflation

Producer output (factory gate) prices increased by 0.5% in January 2023, up from a 0.8% decrease in December 2022 (Table 4).

Table 4: Output prices, index values, inflation rates and percentage point change to the annual inflation rate UK, January 2022 to January 2023

### All manufactured products (GB7S)

### Notes

1. Rates may not correspond to index value changes because of rounding.

Food products provided the largest upward contribution to the output annual rate in the year to January 2023, at 4.09 percentage points (Figure 5). This was mainly driven by preserved meat and meat products. The annual inflation rate for food products was 17.1% in the year to January 2023 (Table 5), which is unchanged from December 2022.

The second largest contributor to the annual rate in the year to January 2023 came from other manufactured products, which contributed 2.63 percentage points (Figure 5) and showed an increase of 11.6% in the year to January 2023. This is up slightly from 11.5% in December 2022. The continued increase was mainly driven by articles of concrete, cement and plaster.

<b>All manufacturing</b>	-0.8	14.6	0.5	13.5

Source: Office for National Statistics – Producer Price Index

The annual rate of producer output inflation decreased by 1.1 percentage points from 14.6% in December 2022 to 13.5% in January 2023.

Of the 10 product groups, 7 show downward contributions to the change in the annual rate. Petroleum products provided the largest downward contribution to the change in the annual output rate, at 0.49 percentage points (Figure 6). Petroleum products saw a monthly decrease of 2.7% in price in January 2023, compared with an increase of 3.1% in January 2022.

## 5 . Producer price inflation data

### [Producer price inflation time series](#)

Dataset | Released 15 February 2023

A comprehensive selection of data on input and output indices. Contains producer price indices of materials and fuels purchased and output of manufacturing industry by broad sector.

### [Input and output producer price inflation: contributions to the annual rates](#)

Dataset | Released 15 February 2023

Contributions to the annual rates of input and output producer price inflation by component and overall rates.

### [Producer price inflation](#)

Dataset MM22 | Released 15 February 2023

UK price movement data at all manufacturing, aggregated industry and product group level. Data supplied from individual manufacturers, importers and exporters. Monthly, quarterly and annual data.

## 6 . Glossary

### Weight

This is the importance of the price of interest relative to other prices collected. With annual chain-linking, this is updated every year using business turnover data.

### Index value

Price level in a specific basket of goods.

### Annual growth rate

The annual inflation rate.

### Link factor

A smoothing factor applied to create a continuous series following a weights change.

### Contribution

A measure of influence that the index has on the overall growth rate. This depends on both the magnitude of the weight and the inflation rate. A positive contribution is an index that is driving a change in the annual growth rate value. Where the contribution is positive but the growth is negative, this indicates that the index is reducing the annual growth rate (for example, the growth rate would be higher if this index had a lower weight).

### Producer price inflation

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

### Input prices

The input price measures the price of materials and fuels bought by UK manufacturers for processing. It includes materials and fuels that are both imported or sourced within the domestic market. It is not limited to materials used in the final product but includes what is required by businesses in their normal day-to-day running, such as fuels.

## Output prices

The factory gate price (output price) is the amount received by UK producers for the goods that they sell to the domestic market. It includes the margin that businesses make on goods, in addition to costs such as labour, raw materials and energy, as well as interest on loans, site or building maintenance, or rent.

## Services producer price inflation

Quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

# 7 . Measuring the data

PPI uses contributions to identify how indices influence the overall inflation rate. This section gives additional information on the calculation and how to interpret it.

## Example scenarios

The following gives examples of how weight and inflation rate changes most commonly affect the contribution. In PPI, the weights usually have greater influence on the contribution as these tend to show greater change than the annual inflation rate:

- decrease in weight and in inflation rate – contribution is negative
- decrease in weight, increase in inflation rate – contribution is usually negative
- no change in weight or inflation rate – no change
- no change in weight, increase in inflation rate – contribution is usually positive
- increase in weight, decrease in inflation rate – contribution is usually positive
- increase in weight, no change in inflation rate – contribution is positive
- increase in weight, increase in inflation rate – contribution is positive

Contributions are calculated using the following formula:

$$\frac{(\text{weight} \times \text{index value} \times \text{link factor})_{\text{for current year}} - (\text{weight} \times \text{index value} \times \text{link factor})_{\text{for previous year}}}{\text{chain linked value for the overall index}}$$

Quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our [Producer Price Indices QMI report](#) and our [Services Producer Price Indices QMI report](#).

Other useful documentation for the PPI and the SPPI are:

- [Producer price indices methods changes article](#)
- [Chain-linking in business prices article](#)
- [Producer price weight changes article](#)
- [Services producer price weight changes article](#)
- [Guidance on using indices in indexation clauses \(PDF, 197KB\)](#)
- [PPI methods and guidance \(PDF, 1.14MB\)](#)
- [SPPI user guidance and methodology article](#)
- [PPI standard errors article](#)
- [SPPI standard errors article](#)

## **Sterling effective exchange rate**

The sterling effective exchange rate measures changes in the strength of sterling relative to baskets of other currencies. The sterling effective exchange rate is only indicative of the rates applied to producer prices. This is because the sterling effective exchange rate is a trade-weighted index that represents all UK trade, whereas producer prices reflect transactions in the manufacturing sector.

## **Economic statistics governance after Brexit**

More information regarding the new governance following the UK's exit from the EU is available in our [Producer Price Inflation, UK, October 2022 bulletin](#).

# **8 . Strengths and limitations**

## **Strengths**

These data:

- provide users with valuable insight into the changes in the prices of goods and services bought and sold by UK manufacturers
- are comprehensive, covering many products at a much greater level of detail than other surveys
- are internationally comparable with any country using the classification by product activity (CPA) or the central product classification (CPC) systems – [the classification structure is available to review on the Eurostat website](#)
- are created using a rotational sampling method to enable many new products and new respondents to be included
- are chain-linked annually to improve results in deflation by reducing substitution bias

## **Limitations**

The limitations are that:

- some products are produced by only a small number of manufacturers, meaning that there may not be enough manufacturers for a detailed and robust analysis, and the sector may be volatile, requiring some estimation
- the data can be revised for 12 months
- the data for the latest two months of the Producer Price Index (PPI) and two quarters of the Services Producer Price Index (SPPI) are provisional

## Response rates in January 2023

The response rate for the domestic Producer Price Index (PPI) and Import Price Index (IPI) show a decrease between December 2022 and January 2023. However, the response rate for the Export Price Index (EPI) shows an increase between December 2022 and January 2023 (Table 6).

Table 6: PPI, IPI and EPI overall effective response rates at time of first publishing  
Percentage, UK, January 2022 to January 2023

### Weighted response

	PPI (domestic)	IPI	EPI
<b>January 2022</b>	65.5	64.1	64.6
<b>February 2022</b>	70.5	70.3	69.2
<b>March 2022</b>	71.3	75.4	73.8
<b>April 2022</b>	71.4	68.2	74.2
<b>May 2022</b>	71.7	76.1	74.1
<b>June 2022</b>	74.0	78.0	69.5
<b>July 2022</b>	67.7	73.0	73.3
<b>August 2022</b>	71.6	71.6	72.0
<b>September 2022</b>	71.9	74.8	78.2
<b>October 2022</b>	73.3	61.3	71.6
<b>November 2022</b>	78.0	73.3	71.7
<b>December 2022</b>	78.2	72.9	73.7
<b>January 2023</b>	77.9	71.7	73.9
