

# Producer price inflation, UK: September 2026, including services July to September 2026

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

# 1 . Main points

- Producer input prices rose by 8.3% in the year to September 2026, up from a revised rise of 6.7% in the year to August.
- Producer output (factory gate) prices rose by 4.6% in the year to September 2026, which is the largest rise since April 2023, up from a revised rise of 3.8% in the year to August.
- On a monthly basis, producer input prices rose by 1.5% and producer output (factory gate) prices rose by 0.8% in September 2026.
- Crude oil provided the largest contribution to the rise in the annual inflation rate for input prices in September 2026, with prices increasing by 14.0% on the month.
- Refined petroleum products provided the largest contribution to the rise in the annual inflation rate for output prices in September 2026, with prices increasing by 9.1% on the month.
- Services producer prices rose by 4.5% in the year to Quarter 3 (July to Sept) 2026, which is the largest rise since Quarter 2 (Apr to June) 2023, up from a revised rise of 4.2% in the year to Quarter 2 2026; on a quarterly basis, services producer prices rose by 0.9% in Quarter 3 2026.
- Transportation and storage services provided the largest upward contribution to change in the annual inflation rate for services producer prices.

## 2 . Inflation figures

Producer input prices rose by 8.3% in the year to September 2026. This is the largest rise since May 2026 and follows a revised increase of 6.7% in the year to August 2026 (Figure 1). Monthly input prices rose by 1.5% in September 2026, up from a revised increase of 0.5% in August (Table 1).

Producer output (factory gate) prices rose by 4.6% in the year to September 2026. This is the largest rise since April 2023 and follows a revised increase of 3.8% in the year to August 2026 (Figure 1). Monthly output prices rose by 0.8% in September 2026, up from a rise of 0.7% in August (Table 1).

The largest contribution to the annual input producer price inflation rate was an upward contribution from inputs of crude oil, where prices rose by 51.0% in the year to September 2026. Price increases in crude oil were partly offset by a downward contribution from inputs of domestic food. Crude oil also provided the largest contribution to the change in the annual input producer price inflation rate. Find more detail in [Section 3: Input prices](#).

The largest contribution to the annual output producer price inflation rate was an upward contribution from outputs of coke and refined petroleum products, where prices rose by 63.3% in the year to September 2026. These were partly offset by downward contributions from motor vehicles and food products. Coke and refined petroleum products also provided the largest upward contribution to the change in the annual output producer price inflation rate, with prices rising by 9.1% in September 2026. Find more detail in [Section 4: Output prices](#).

The increases in input and output price inflation were mainly caused by oil-related products. These movements come as the data continue to be affected by the conflict in the Middle East. View more information on the data used for oil and energy prices in [Section 8: Data sources and quality](#).

Services producer prices rose by 4.5% in the year to Quarter 3 (July to Sept) 2026. This is the largest rise since Quarter 2 (Apr to June) 2023 and follows a revised increase of 4.2% in the year to Quarter 2 2026 (Figure 2). On a quarterly basis, prices rose by 0.9% in Quarter 3 2026, down from a revised increase of 1.9% in Quarter 2 (Table 2).

The largest contribution to the annual services producer price inflation rate was an upward contribution from transportation and storage services, where prices rose by 10.7% over the past year. Find more detail in [Section 5: Services prices](#)

Producer Price Index (PPI) estimates for both August and September 2026, and Services Producer Price Index (SPPI) estimates for Quarter 2 and Quarter 3 2026 are provisional. PPI figures for the latest 12 months and SPPI figures for the latest 4 quarters are subject to revisions as additional survey data are returned and validated. Effective response rates at the time of first publishing can be found in [Section 8: Data sources and quality](#).

## 3 . Input prices

Of the 10 product groups for the input Producer Price Index (PPI), 9 made upward contributions to the annual inflation rate in September 2026. The largest of these came from inputs of:

- crude oil
- metals and non-metallic mineral products
- other produced material

The prices of inputs of crude oil rose by 51.0% in the year to September 2026, up from a revised increase of 29.9% in the year to August (Table 3). Crude oil also provided the largest contribution to change in the annual inflation rate between August and September 2026. On a monthly basis, crude oil prices rose by 14.0% in September 2026, up from a revised increase of 2.1% in August.

The prices of inputs of metals and non-metallic mineral products rose by 9.6% in the year to September 2026, compared with a revised increase of 9.3% in the year to August (Table 3). The annual price rise in September was partly caused by increases in prices of:

- basic iron, steel and ferro-alloys
- machining services
- non-EU imports of precious metals (particularly silver)

The prices of inputs of other produced material rose by 12.1% in the year to September 2026, compared with a revised increase of 10.8% in the year to August (Table 3). The annual price rise in September was partly caused by price increases in refined petroleum for the domestic market, where prices increased by 63.3% in the year to September 2026.

The only offsetting downward contribution to the annual inflation rate came from inputs of domestic food, where prices fell by 1.3% in the year to September 2026, up from a revised fall of 1.5% in August (Table 3). The annual price fall was partly caused by price falls in milk from dairy cattle. On a monthly basis, domestic food input prices rose by 0.4%, while imported food prices rose by 0.2%.

Fuel covers electricity and gas (D35) and coal (B05), according to [Eurostat's Classification of products by activity \(CPA 2.1\)](#).

The Import Price Index (IPI) measures the price of materials and fuels imported by UK manufacturers. It rose by 9.9% in the year to September 2026, up from a revised increase of 7.3% in the year to August. On a monthly basis, import prices rose by 2.4% in September 2026, compared with a revised rise of 1.4% in August. The annual price rise was mainly caused by non-EU imports of crude petroleum. The sterling effective exchange rate rose by 0.3% in the year to September 2026, down from a rise of 0.8% in the year to August (Table 4).

Source: Import Price Index (IPI) from the Office for National Statistics, sterling effective Exchange Rate Index (ERI) from the Bank of England

#### Notes

1. Total imports (GD74) represent roughly one-fifth of overall materials and fuels (input prices) in terms of index weight.

## 4 . Output prices

Of the 10 product groups for the output Producer Price Index (PPI), 8 made upward contributions to the annual inflation rate in September 2026. The largest of these came from:

- outputs of coke and refined petroleum products
- other outputs from manufacturing
- basic metals, fabricated metal products and machinery

Prices for coke and refined petroleum products rose by 63.3% in the year to September 2026, up from a revised rise of 50.8% in the year to August (Table 5). Petroleum products also provided the largest contribution to the upwards change in the annual inflation rate between August and September 2026. On a monthly basis, prices for this product group rose by 9.1% in September 2026, down from a revised increase of 9.7% in August.

Prices for other outputs from manufacturing rose by 3.6% in the year to September 2026, unchanged from the revised increase of 3.6% in the year to August (Table 5). This reflected higher prices for plastic products, as input costs for polyvinyl chloride (PVC) and resin saw rises which were attributed to the effect of the conflict in the Middle East.

Prices for basic metals, fabricated metal products and machinery rose by 6.1% in the year to September 2026, unchanged from the revised increase of 6.1% in the year to August (Table 5). These price increases were mainly caused by higher prices for machining services.

There were minimal offsetting downwards contributions to the annual rate from:

- outputs of motor vehicles and other transport equipment
- outputs of food products

Prices for food products fell by 0.6% in the year to September 2026, up from a revised fall of 1.0% in the year to August (Table 5). This was partly caused by falls in the prices of dairy and cheese products.

Prices for motor vehicles and other transport equipment fell by 1.2% in the year to September 2026, up from a revised decrease of 1.6% in August (Table 5).

Table 5: Output producer price inflation rates and weights  
UK, August and September 2026

Source: Producer Price Index (PPI) from the Office for National Statistics

The Export Price Index (EPI) rose by 8.5% in the year to September 2026, up from a revised rise of 7.3% in the year to August. The annual price rise was mainly caused by exports of refined petroleum products. On a monthly basis, export prices rose by 1.3% in September 2026, up from a revised rise of 0.4% in August.

## 5 . Services prices

All nine product groups for the Services Producer Price Index (SPPI) made upward contributions to the annual inflation rate in Quarter 3 (July to Sept) 2026. The largest of these came from:

- transportation and storage services
- professional, scientific and technical services

Prices for transportation and storage services rose by 10.7% in the year to Quarter 3 2026, compared with a rise of 8.7% in the year to Quarter 2 (Apr to June) (Table 6). The annual price rise in Quarter 3 2026 was mainly caused by increases in prices for "other transportation support services" because of increased shipping rates and fuel charges resulting from the conflict in the Middle East. This product group also provided the largest contribution to change in the annual inflation rate between Quarter 2 and Quarter 3 2026. On a quarterly basis, prices for this product group rose by 2.5% in Quarter 3 2026, down from a revised increase of 7.0% in Quarter 2.

Prices for professional, scientific and technical services rose by 5.7% in the year to Quarter 3 2026, compared with a revised rise of 5.4% in the year to Quarter 2 2026 (Table 6).

Table 6: Services producer price inflation rates and weights  
UK, Quarter 2 (Apr to June) 2026 and Quarter 3 (July to Sept) 2026

| Service group                                            | Quarter 2 2026               |                           | Quarter 3 2026               |                           | 2026 Weight (%) |
|----------------------------------------------------------|------------------------------|---------------------------|------------------------------|---------------------------|-----------------|
|                                                          | Quarterly inflation rate (%) | Annual inflation rate (%) | Quarterly inflation rate (%) | Annual inflation rate (%) |                 |
| Maintenance and repair services of motor vehicles        | 3.4                          | 8.3                       | 1.3                          | 6.6                       | 2.6             |

## 6 . Data on producer price inflation

### [Producer price inflation time series](#)

Dataset PPI | Released 21 October 2026

A comprehensive selection of data on input and output indices. Contains producer price indices of materials and fuels purchased and output of manufacturing industry by broad sector.

### [Producer price inflation statistics](#)

Dataset | Released 21 October 2026

Price index data and monthly and annual inflation rates for UK producer price inflation (input, output, import, export).

### [Services producer price inflation time series](#)

Dataset SPPI | Released 21 October 2026

Quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

### [Services producer price inflation statistics](#)

Dataset | Released 21 October 2026

Price index data and quarterly and annual inflation rates for UK service producer price inflation.

## 7 . Glossary

### Contribution

As the aggregate producer prices indices are built up from individual product indices, it is possible to decompose overall inflation into contributions from different products. Those contributions reflect both the inflation rates for each product and their weight in the index.

### Input prices

The price of materials and fuels bought by UK manufacturers for processing. It includes materials and fuels that are either imported or sourced from within the domestic market. It is not limited to materials used in the final product but includes what is required by businesses in their normal day-to-day running, such as fuels.

### Output prices

The amount received by UK producers for the goods that they sell to the domestic market, also known as factory gate prices. It includes the margin that businesses make on goods, in addition to costs, such as labour, raw materials and energy, as well as interest on loans, site or building maintenance, or rent.

### Precious metals

These are part of section C2441 of [Eurostat's Classification of products by activity \(CPA 2.1\)](#), and include silver (C244110), gold (C244120) and platinum (C244130).

### Producer price inflation

The change in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices). If the producer price inflation rate is a positive value, this indicates that prices have risen, while a negative value indicates that prices have fallen.

### Services producer price inflation

The quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

## Weight

The importance of the price of interest relative to other prices collected. With annual chain-linking, this is updated every year using business sales revenue data.

## 8 . Data sources and quality

More information on the strengths and limitations of the data, methods used, and the data uses and users is available in our [Producer Price Indices \(PPI\) quality and methodology information \(QMI\)](#) and our [Services Producer Price Indices \(SPPI\) QMI](#).

### Development of producer price statistics

We are continuing to improve the quality of these statistics to address the findings and requirements set out in the Office for Statistics Regulation's (OSR's) [Spotlight on Quality: PPI report](#). Information on how we plan to address the OSR requirements can be found in our [Producer prices development plan: October 2025 article](#). Once the developments are complete, we will begin the process for seeking reaccreditation. These statistics are currently designated as official statistics.

### Oil and energy data

The crude oil data are collected from the four crude oil refining businesses within the UK. They are based on the volume and value of oil purchases made in the first part of the month (typically the first week), supplemented with the refining businesses' estimate of the volume and value of purchases for the remainder of the month. It should be noted that these purchases will represent a (varying) mix of future and spot prices.

The oil derivatives data (diesel, gas oil and aviation turbine fuel) are also collected from the refining businesses. The process is like that used for crude oil but refers to sales, rather than purchases.

The unleaded petrol data are sourced from pump prices from a range of business types. They are based on weekly data with the necessary tax elements removed.

The gas and electricity data are an average price for the month from a panel of suppliers relating to the supply of gas and electricity to industrial and commercial end-users. These data differ from the data provided for the purposes of the Consumer Prices Index (CPI).

The data include a mixture of fixed price contracts and flexible price contracts, compiled by the Department for Energy Security and Net Zero (DESNZ). Like the oil data, the first estimate is based on the average price for the first part of the month (based on the volume and value of the energy supplied), supplemented with the suppliers' estimate of the volume and value for the remainder of the month.

All these figures are revised as new data (for example, on the volumes and values of oil purchased) and are received after one to two months.

## Response rates

The response rates for the domestic PPI, the Import Price Index (IPI) and the Export Price Index (EPI) were all higher in September 2026 than they were in September 2025 (Table 7).

Table 7: PPI, IPI and EPI overall effective response rates at time of first publishing  
Percentage, UK, September 2025 to September 2026
