

Statistical bulletin

## **Employment in the UK: September 2021**

Estimates of employment, unemployment and economic inactivity for the UK.

Release date: 14 September 2021 Next release: 12 October 2021

## **Notice**

### 30 September 2021

Due to a calculation error in the method used to reweight the Labour Force Survey, which uses a three-month rolling average of RTI data, there is a lag of one month. Our analysis shows the impact on the population levels and headline labour market levels estimates is, though, very small with the published headline labour market rates unchanged. The impact on LFS estimates for employment, unemployment and economic inactivity level at UK level is mostly below 0.1% and the impact on rates is less than 0.02 percentage points.

- Vacancies and jobs in the UK
- Labour market in the regions of the UK
- Earnings and employment from Pay As You Earn Real Time Information, UK
- Public sector employment, UK

## 2. Main points

- May to July 2021 estimates show a continuing recovery in the labour market, with a quarterly increase in the employment rate, while the unemployment and economic inactivity rates decreased.
- Total hours worked increased on the quarter with the relaxation of many coronavirus (COVID-19)
  restrictions.
- The UK employment rate was estimated at 75.2%, 1.3 percentage points lower than before the coronavirus pandemic (December 2019 to February 2020), but 0.5 percentage points higher than the previous quarter (February to April 2021).
- The UK unemployment rate was estimated at 4.6%, 0.6 percentage points higher than before the pandemic, but 0.3 percentage points lower than the previous quarter.
- The UK economic inactivity rate was estimated at 21.1%, 0.9 percentage points higher than before the pandemic, but 0.3 percentage points lower than the previous quarter.

## 3. Coronavirus and measuring the labour market

Latest Labour Force Survey (LFS) estimates are based on interviews that took place from May to July 2021. Many of the government lockdown restrictions were eased during this period.

Because of coronavirus (COVID-19) and the suspension of face-to-face interviewing, we had to make operational changes to the LFS, which moved to a "by telephone" approach. This introduced an increased non-response bias to the survey, which was partially mitigated by the introduction of housing tenure-based weights into the survey in October 2020, as detailed in <u>Coronavirus and its impact on the Labour Force Survey</u>.

However, it was acknowledged that further improvement work was required to deal with the increase in non-response from those with a non-UK country of birth or nationality. As a result, a new weighting methodology was introduced in July 2021, which calibrates to UK, EU and non-EU-born weighting populations for periods from January to March 2020. The impact on headline measures of rates is relatively small but there is a larger impact on estimates of levels and changes in levels. Further information is available in <a href="Impact of reweighting on Labour Force Survey key indicators, UK: 2020">Impact of reweighting on Labour Force Survey key indicators, UK: 2020</a>. All estimates in this release are based on the new methodology.

## 4. Summary

Table 1: May to July 2021 headline measures and changes
UK headline economic status levels and rates, total weekly hours, and redundancy levels and rates, seasonally adjusted (unless otherwise stated), May to July 2021

	Level/Rate	Change on quarter	Change on year	Change since December 2019 to February 2020
Employment (000s, aged 16+)	32,357	+183	-202	-716
Employment rate (aged 16 to 64)	75.2%	+0.5pp	-0.4pp	-1.3pp
Unemployment (000s, aged 16+)	1,550	-86	+81	+186
Unemployment rate (aged 16+)	4.6%	-0.3pp	+0.3pp	+0.6pp
Economically inactive (000s, aged 16 to 64)	8,711	-121	+75	+341
Economic inactivity rate (aged 16 to 64)	21.1%	-0.3pp	+0.2pp	+0.9pp
Total weekly hours (millions)	1,006.8	+43.2	+152.6	-45.4
Redundancies (000s, aged 16+, not seasonally adjusted)	94	-15	-62	-13
Redundancy rate (per thousand, aged 16+, not seasonally adjusted)	3.4	-0.6	-2.2	-0.5

Figure 1: May to July 2021 estimates show a quarterly increase in the employment rate, while the unemployment rate and the economic inactivity rate decreased

UK employment, unemployment, and economic inactivity rates, seasonally adjusted, between May to July 2006 and May to July 2021

#### Download this chart

#### .xlsx

During the coronavirus (COVID-19) pandemic, there was a decrease in the employment rate and an increase in the economic inactivity and unemployment rates for both men and women (Figure 2). Over the last quarter, however, there have been increases in the employment rates and decreases in the unemployment rates for both men and women. There was a record quarterly decrease in the inactivity rate for men but it is still above prepandemic rates, while the inactivity rate for women has returned to pre-pandemic rates.

Figure 2: Following large falls over the pandemic, the employment rates for men and women continue to show signs of recovery

UK economic status by sex, seasonally adjusted, cumulative change from December 2019 to February 2020, for each period up to May to July 2021

# Figure 2: Following large falls over the pandemic, the employment rates for men and women continue to show signs of recovery

UK economic status by sex, seasonally adjusted, cumulative change from December 2019 to February 2020, for each period up to May to July 2021

#### Source: Office for National Statistics - Labour Force Survey

Young people (those aged 16 to 24 years) have been particularly affected by the pandemic, with the employment rate decreasing and the unemployment and economic inactivity rates increasing by more than seen for those aged 25 years and over. Over the last quarter, however, there was a strong increase in the employment rate and decrease in the unemployment and inactivity rates for young people (Figure 3).

Figure 3: The employment rate for young people (those aged 16 to 24 years) has increased on the quarter

UK economic status rates by age (people aged 16 to 24 years and 25 years and over), seasonally adjusted, cumulative change from December 2019 to February 2020, for each period up to May to July 2021

## Figure 3: The employment rate for young people (those aged 16 to 24 years) has increased on the quarter

UK economic status rates by age (people aged 16 to 24 years and 25 years and over), seasonally adjusted, cumulative change from December 2019 to February 2020, for each period up to May to July 2021

Source: Office for National Statistics - Labour Force Survey

## 5. Employment

Following an increase in the <u>employment</u> rate since early 2012, the rate decreased from the start of the coronavirus (COVID-19) pandemic in December 2019 to February 2020; however, there has been an increase since the end of 2020.

The number of part-time workers decreased strongly during the pandemic, but has been increasing since April to June 2021 (Figure 4), making up the majority of the increase in employment in the latest period.

Figure 4: Part-time workers have seen the second quarterly increase since early in the pandemic

UK employment by full-time and part-time workers (aged 16 years and over), seasonally adjusted, cumulative change from May to July 2016, for each period up to May to July 2021

## Figure 4: Part-time workers have seen the second quarterly increase since early in the pandemic

UK employment by full-time and part-time workers (aged 16 years and over), seasonally adjusted, cumulative change from May to July 2016, for each period up to May to July 2021

Source: Office for National Statistics - Labour Force Survey

#### **Hours worked**

<u>Total actual weekly hours worked</u> in the UK increased by 43.2 million hours from the previous quarter, to 1.01 billion hours in May to July 2021 (Figure 5). This coincided with the relaxing of coronavirus lockdown measures, which had stalled the recent recovery in total hours. However, this is still 45.4 million below pre-pandemic levels (December 2019 to February 2020).

Figure 5: Total actual weekly hours worked increased on the quarter, reflecting the relaxation of coronavirus restrictions

UK total actual weekly hours worked (people aged 16 years and over), seasonally adjusted, between May to July 2006 and May to July 2021

## Figure 5: Total actual weekly hours worked increased on the quarter, reflecting the relaxation of coronavirus restrictions

UK total actual weekly hours worked (people aged 16 years and over), seasonally adjusted, between May to July 2006 and May to July 2021

Source: Office for National Statistics – Labour Force Survey

## 6. Unemployment

The <u>unemployment</u> rate had generally been falling since late 2013 up until the start of the coronavirus (COVID-19) pandemic in December 2019 to February 2020. It has increased since then but has fallen since the end of 2020.

Figure 6: The number of people who were unemployed for up to 12 months decreased on the quarter

UK unemployment by duration (aged 16 years and over), seasonally adjusted, between May to July 2016 and May to July 2021

## Figure 6: The number of people who were unemployed for up to 12 months decreased on the quarter

UK unemployment by duration (aged 16 years and over), seasonally adjusted, between May to July 2016 and May to July 2021

Source: Office for National Statistics - Labour Force Survey

The quarterly decrease in unemployment was driven by those unemployed for up to 12 months. Quarterly decreases in those unemployed for up to 6 months have slowed in the latest periods while those unemployed for between 6 and 12 months have decreased from the peak reached in early 2021. Meanwhile, those in long-term unemployment (unemployed for over 12 months) continued to increase on the quarter (Figure 6).

## 7. Economic inactivity

Since comparable records began in 1971, the <u>economic inactivity</u> rate has generally been falling; however, it has increased during the coronavirus (COVID-19) pandemic.

Figure 7: Following increases during the pandemic, the number of people economically inactive because they are students or for "other" reasons has fallen

UK economically inactive by reason (people aged 16 to 64 years), seasonally adjusted, between May to July 2016 and May to July 2021

Figure 7: Following increases during the pandemic, the number of people economically inactive because they are students or for " other " reasons has fallen

UK economically inactive by reason (people aged 16 to 64 years), seasonally adjusted, between May to July 2016 and May to July 2021

Source: Office for National Statistics - Labour Force Survey

#### Notes:

- 1. Discouraged workers are those who are not looking for work because they believe no jobs are available.
- Other reasons for being economically inactive include those who are waiting for the results of a job
  application; have not yet started looking for work; do not need or want employment; have given an
  uncategorised reason for being economically inactive; or have not given a reason for being economically
  inactive.

In terms of reasons for economic inactivity (Figure 7), the increase since the start of the coronavirus (COVID-19) pandemic (December 2019 to February 2020) was largely driven by those who are economically inactive because they are students or for "other" reasons. Both of these categories are now decreasing.

The number of economically inactive who stated that they wanted a job increased right at the start of the pandemic, but has fallen since to a record low.

## 8. Redundancies

In May to July 2021, reports of redundancies in the three months prior to interview decreased by 0.6 per thousand employees on the quarter to 3.4 per thousand employees (Figure 8), similar to pre-coronavirus (COVID-19) pandemic levels.

Figure 8: The redundancy rate has returned to pre-pandemic levels

UK redundancy rate, (people aged 16 years and over), not seasonally adjusted, between May to July 2006 and May to July 2021

## Figure 8: The redundancy rate has returned to pre-pandemic levels

## 9. Employment in the UK data

### Employment, unemployment and economic inactivity

Dataset A05 SA | Released 14 September 2021

Estimates of UK employment, unemployment and economic inactivity broken down into age bands.

#### Full-time, part-time and temporary workers

Dataset EMP01 SA | Released 14 September 2021

Estimates of UK employment including a breakdown by sex, type of employment, and full-time and part-time working.

#### Actual weekly hours worked

Dataset HOUR01 SA | Released 14 September 2021

Estimates for the hours that people in employment work in the UK.

#### Unemployment by age and duration

Dataset UNEM01 SA | Released 14 September 2021

Estimates of unemployment in the UK including a breakdown by sex, age group and the length of time people are unemployed.

#### Economic inactivity by reason

Dataset INAC01 SA | Released 14 September 2021

Estimates of those not in the UK labour force measured by the reasons given for economic inactivity.

#### Labour Force Survey sampling variability

Dataset A11 | Released 14 September 2021

Labour Force Survey (LFS) sampling variability (95% confidence intervals).

#### Labour Force Survey single month estimates

Dataset X01 | Released 14 September 2021

Labour Force Survey (LFS) single-month estimates of employment, unemployment and economic inactivity have been published by the Office for National Statistics (ONS) since 2004. Not designated as National Statistics.

#### Labour Force Survey weekly estimates

Dataset X07 | Released 14 September 2021

Labour Force Survey (LFS) weekly estimates of employment, unemployment, economic inactivity and hours in the UK. All estimates are calculated from highly experimental weekly Labour Force Survey datasets.

## 10. Glossary

### Actual and usual hours worked

Statistics for <u>usual hours worked</u> measure how many hours people usually work per week. Compared with <u>actual hours worked</u>, they are not affected by absences and so can provide a better measure of normal working patterns. For example, a person who usually works 37 hours a week but who was on holiday for a week would be recorded as working zero actual hours for that week, while usual hours would be recorded as 37 hours.

Workers temporarily absent from a job as a result of the coronavirus (COVID-19) pandemic would still be classed as employed; however, they would be employed working no hours. This has directly affected estimates of total actual hours worked during the pandemic. Since the average actual weekly hours are the average of all in employment, those temporarily absent from a job also affected these estimates.

### **Economic inactivity**

People not in the labour force (also known as <u>economically inactive</u>) are not in employment but do not meet the internationally accepted definition of unemployment because they have not been seeking work within the last four weeks and/or are unable to start work in the next two weeks. The economic inactivity rate is the proportion of people aged between 16 and 64 years who are not in the labour force.

### **Employment**

Employment measures the number of people in paid work or who had a job that they were temporarily away from (for example, because they were on holiday or off sick). This differs from the number of jobs because some people have more than one job. The employment rate is the proportion of people aged between 16 and 64 years who are in employment.

Workers furloughed under the Coronavirus Job Retention Scheme or those who are self-employed but temporarily not in work, have a reasonable expectation of returning to their jobs after a temporary period of absence. Therefore, they are classified as employed under the International Labour Organization definition.

A more detailed explanation is available in our guide to labour market statistics.

#### Redundancies

The redundancy estimates measure the number of people who were made redundant or who took voluntary redundancy in the three months before the Labour Force Survey interviews; it does not take into consideration planned redundancies.

### Unemployment

<u>Unemployment</u> measures people without a job who have been actively seeking work within the last four weeks and are available to start work within the next two weeks. The unemployment rate is not the proportion of the total population who are unemployed. It is the proportion of the economically active population (that is, those in work plus those seeking and available to work) who are unemployed.

A more detailed glossary is available.

## 11. Measuring the data

This bulletin relies on data collected from the Labour Force Survey (LFS), the largest household survey in the UK.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the <u>LFS Quality and Methodology Information (QMI) report</u>.

The <u>LFS performance and quality monitoring reports</u> provide data on response rates and other quality-related issues for the LFS.

## Reweighting

Labour Force Survey (LFS) responses published from 15 July 2021 have been reweighted to new populations using growth rates from HM Revenue and Customs (HMRC) Real Time Information (RTI), to allow for different trends during the coronavirus (COVID-19) pandemic. The reweighting gives improved estimates of both rates and levels.

#### Coronavirus

View more information on how labour market data sources are affected by the coronavirus (COVID-19) pandemic, published on 6 May 2020.

View a comparison of our labour market data sources and the main differences.

## 12. Strengths and limitations

### Uncertainty in these data

The estimates presented in this bulletin contain <u>uncertainty</u>.

The figures in this bulletin come from the Labour Force Survey (LFS), which gathers information from a <u>sample</u> of households across the UK rather than from the whole population. The sample is designed to be as accurate as possible given practical limitations. Results from sample surveys are always estimates, not precise figures. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons.

The data in this bulletin come from the Labour Force Survey, a survey of households. It is not practical to survey every household each quarter, so these statistics are estimates based on a large sample.

As the number of people available in the sample gets smaller, the variability of the estimates that we can make from that sample size gets larger. Estimates for small groups (for example, unemployed people aged between 16 and 17 years), which are based on small subsets of the LFS sample, are less reliable and tend to be more volatile than for larger aggregated groups.

In general, changes in the numbers (and especially the rates) reported in this bulletin between three-month periods are small and are not usually greater than the level that can be explained by sampling variability. Short-term movements in reported rates should be considered alongside longer-term patterns in the series and corresponding movements in other sources to give a fuller picture.

Information on the quality of estimates is available in our Labour Force Survey sampling variability table.

### Comparability

The data in this bulletin follow internationally accepted definitions specified by the <u>International Labour</u> <u>Organization (ILO)</u>. This ensures that the estimates for the UK are comparable with those for other countries.

The annual <u>reconciliation report of job estimates article</u>, which compares the latest workforce jobs series estimates with the equivalent estimates of jobs from the LFS and is usually published every March, has been postponed until we are able to take the latest adjustments to the LFS into account.

Further information is available in A guide to labour market statistics.

### Note on headline employment, unemployment and inactivity rates

The headline employment and inactivity rates are based on the population aged 16 to 64 but the headline unemployment rate is based on the economically active population aged 16 and over. The employment and inactivity rates for those aged 16 and over are affected by the inclusion of the retired population in the denominators and are therefore less meaningful than the rates for those aged from 16 to 64. However, for the unemployment rate for those aged 16 and over, no such effect occurs as the denominator for the unemployment rate is the economically active population which only includes people in work or actively seeking and able to work.

### Note on headline employment, unemployment and inactivity levels

The headline employment and unemployment levels are for those aged 16 and over; they measure all people in work or actively seeking and able to work. However, the headline inactivity level is for those aged 16 to 64. The inactivity rate for those aged 16 and over is less meaningful as it includes elderly people who have retired from the labour force.

<sup>1.</sup> The Labour Force Survey (LFS) is a survey of households in the UK.

<sup>2.</sup> The headline employment rate is the number of people aged 16 to 64 in employment divided by the population aged 16 to 64.

<sup>3.</sup> The headline unemployment rate is the number of unemployed people (aged 16+) divided by the economically active population (aged 16+). The economically active population is defined as those in employment plus those who are unemployed.

<sup>4.</sup> The headline inactivity rate is the number of people aged 16 to 64 divided by the population aged 16-64.

<sup>1.</sup> The total series includes people who do not state their country of birth or nationality. The total levels series MGTM does not therefore equal the sum of the "UK" and "Non-UK" series.

The estimates shown in this table relate to the number of people in employment and should not be used as a proxy for flows of foreign migrants into the UK.

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gov.uk

This series consists of all 27 EU member states excluding the UK. This series equals the sum of EU14, EU8, EU2 and Other EU.
 Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain and Sweden.

<sup>4.</sup> Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovak Republic and Slovenia.

<sup>5.</sup> Romania and Bulgaria.6. Cyprus, Malta and Croatia

<sup>7.</sup> Total Non-EU equals the sum of Other Europe, Total Africa, Total Asia and Total America and Oceania

Labour market statistics enquiries: labour.market@ons.gov.uk

<sup>1.</sup> The total series includes people who do not state their country of birth or nationality. The total levels series therefore do not equal the sum of the "UK" and "Non-UK" series.

<sup>2.</sup> This series consists of all 27 EU member states excluding the UK.

<sup>3.</sup> This series consists of those people whose main reason for being economically inactive was because they were students. It does not include all students as some students will be included in the employment and unemployment estimates.

<sup>1.</sup> Discouraged workers are those who are not looking for work because they believe no jobs are available.
2. Other reasons include people who (i) are waiting the results of a job application, (ii) have not yet started looking for work, (iii) do not need or want employment, (iv) have given an uncategorised reason for being economically inactive, or (v) have not given a reason for being economically inactive.

<sup>1.</sup> Not in full-time education includes people in part-time education and/or some form of training. Estimates of the number of young people who were not in employment, education or training ("NEET") cannot therefore be derived from this table. Estimates of young people who were NEET are published separately at:

<sup>2.</sup> People in full-time education are employed if they have a part-time job or unemployed if they are looking for part-time employment.

<sup>3.</sup> Denominator = all persons in the relevant age group for economically active, total in employment and economically inactive; economically active for unemployment.

 $Labour\ market\ statistics\ enquiries: labour.market @ons.gov.uk$ 

<sup>1.</sup> The redundancy level is the number of people who were made redundant in the three months prior to interview. The figure is not seasonally adjusted.

<sup>2.</sup> The redundancy rate is the ratio of the redundancy level for the given quarter to the seasonally adjusted number of employees in the previous quarter, multiplied by 1,000.
