Subject:	RE: 848299/VR: Areas with high student population

Hi [REDACTED]

I think the response needs to say something along the lines of:

- The aim of the student case studies is to carry out analysis of different data sources to understand different types of student area better and to provide insight into the quality of existing estimates and guidance on the development of future estimates. These case studies will not provide a direct assessment of the accuracy of previous population projections as we would always expect differences between projections and subsequent population levels.
- Future population and household projections will in turn benefit from having the best available data feeding into the assumptions which underpin them, for example by making use of the rebased series of mid-year population estimates which we plan to publish in early 2023.
- We have not yet announced which local authority districts will be included in the case studies. We plan to provide information about which areas have been selected in our population and migration statistics newsletter - that you can register to receive by [subscribing to our mailing list](#) - ahead of their publication planned for October 2022.

Hope this helps.

Best wishes,

Nigel

Subject: 848299/VR: Areas with high student population

I understand that work is being done to verify the accuracy of population projections for cities with high student populations.

I am trying to find out which cities have been selected for the case studies as I cannot find this from the search function on the website, not can I find anything in upcoming releases.

I read the Update on research and plans for population estimates and projections: May 2022

Which explained that there would be case studies of relevant areas in three broad categories of LA.

It also said

'We plan to produce and publish the studies during summer 2022. The selection of the initial LAs for the case studies is in progress.'

Please can you tell me which places have been selected for the case studies and when will the results be available?

Then, will this be applied to verify local level population projections for the next 10 years?

Regards

Subject: RE: LA List for DPM publication

Hi Beck,

In addition to the LAs on your list for the DPM pilot, the following LAs are selected for the LA student case studies which will be published on the same day in October as the DPM pilot publication:

1. Ceredigion
2. Guildford
3. Warwick
4. Swansea

Can you add these to the list of LAs to be included in the DPM pilots? We will add the ones we don't have to the student LA case studies, so that everything is consistent.

Best wishes,

Nigel

Subject: LA List for DPM publication

Hi Nigel,

Really helpful to chat to you earlier. Just to summarise what we (in DPM) think is the happening:

- DPM will publish a **'selection' of LAs** following our September milestone for **annual to June 2022** estimates
- The **publication will be October**, dependent on Census publication of SYOA estimates

- The TFG on data for population change has been commissioned by Jen to explore which data sets we have in the office could indicate/give intelligence on population change
- The 'LA engagement' work over the summer will feed into what we are doing and vice versa, so that we are all on the same page about what we know/where our gaps are

Below is the list we are currently working to. If you think any are missed do let us know ASAP. we are keen to agree and finalise this list to allow planning and work to continue over the next month without risking our deadlines. We should then all be working to the same list of LAs over the summer for the plethora of activities to make sure we are all on the same page.

Blackpool

Boston

Cambridge

Coventry

Gwynedd

Islington

Manchester

Newham

North Norfolk

Westminster

Do let me/Greg know if the lists are different and we can bring them together.

Thanks

Beck

Hi [REDACTED]

Thanks for your enquiry about specific work or engagement with Canterbury.

Work to finalise the selection of LAs to include in the initial case studies will be done after the publication of the first 2021 Census results on 28 June. We will liaise with representatives from the selected LAs at that point and will finalise the analysis to be included between then and the publication, planned for the summer.

We would really appreciate it if you could [give us some feedback](#) on the service you received today - it takes less than a minute and your comments will help us to improve our services.
