We're actually in a conversation about this at the moment! Here's our thoughts so far (I'm still editing it, by the way!) 📄

Subject: Work Request for BDB - simplyfiying content ...had some thoughts over the weekend

Morning all,
Hope you all had a good weekend.

A thought as to what to write in the work request came to me over the weekend - don't worry I didn't lose any sleep over it. It would mean that we can submit the work request more promptly and take a bit more time considering requirements.

- The paragraph that asks for Scope.
Don't list your requirements just keep it to a couple of sentences along the lines of... re-writing the record management system and revamping/reviewing the design of the

Fw: Work Request for BDB - simplifying content ...had some thoughts over the week

BDB to accommodate the new system.

This actually is what we did in the previous one.

Somewhere I think it would be useful to state something like review/redesign the BDB in such a way that it would not be possible for any third party to claim copyright infringement.

- Requirements.

List your requirements in a BDB document - these will probably need to be transferred to a PID at some point because we'll have to make sure that our documentation is properly produced.

A couple of things from us...

██████████

Lose the Alert form down the back of the sofa while they are doing it

We could create something similar by using the standard link message form and auto setting the priority if they wanted something popping up in the icon column

Because of the colour of it I feel more like closing it down instantly instead of reading it

██████████

I'd like the left hand navigators to be revamped a bit. I think some of the wording could be a bit more meaningful eg "Edit ACL Setter" something like "Manage access to database."

Give me a shout if you want a quick chat

Thanks,

██████████
