Description

Morning all

For reasons which I won't go into here (though we all know what they are) we have the opportunity of creating an entirely new ERMS and, because the current system is so wrapped up with the BDBs, we're also in the position of being able to redesign how the BDB works.

To that end, as a bunch of us are in Titch on Thursday, can we invite you along to throw ideas at us about what you would like the new ERMS to do, what you want the BDB to do, what annoys you about either of the current systems, how you want them to look and anything else you can think of around BDBs and the ERMS.

We want to get input from people who are users of the systems rather than system overlords so if you can spare an hour or so, that would be great.

█████ can I ask a favour? Can you make sure there's a flipchart and pens available so we can capture the best ideas, please?

Personal Notes
