Hi [redacted]

If we say that what about our list of possible improvements to both the BDB template and the ERMS that we are compiling?

Regards

I've just had a run through the document with [redacted]. He's given me some further pointers which should help make sure that we've got everything captured and clear.

So the next bit I just want to check is Quality Expectations
This is what we have put

Re: Front door work request 2

<Define the Customers Quality Expectations with reference to the relative importance of time, cost and quality of the product so that future decisions may be based on what factor is paramount to success>

An expectation to have a refreshed BDB design including a new EDRMS within three months of starting the work.

but the sort of thing to think about is do you want it to function as it does now or do you want it to perform quicker?

So you could say something as simple as

"The expectation is that this will provide the same functionality as the current application"

If you're happy for me to go with this then let me know.

Thanks,
