

## 2014-based National Population Projections – 100 year variant projections

### Background

These files contain the 2014-based national population projections for 100 years ahead. These projections were previously published for 25 years ahead and are for illustrative purposes only. They should be treated with caution in view of the increased uncertainty on demographic behaviour that far in the future.

### Country codes

The two letter code at the start of the file name represents the country the data relates to:

en	England
wa	Wales
sc	Scotland
ni	Northern Ireland
gb	Great Britain
uk	United Kingdom

### Variant codes

The three letter key in the file name indicates the projection type:

cnp	No Change Variant
cnp	Constant Fertility Variant
hlh	Young Age Structure Variant
hnp	High Fertility Variant
lhl	Old Age Structure Variant
lpp	Low Fertility Variant
phl	High Life Expectancy Variant
plp	Low Life Expectancy Variant
pnp	No Mortality Improvement Variant
ppb	Long Term Balanced Net Migration Variant (UK only)
ppl	High Migration Variant
ppl	Low Migration Variant
ppz	Zero Net Migration (Natural Change Only) Variant
rpp	Replacement Fertility Variant

### Table descriptions

Three files are provided for each country/variant combination. The file name reflects the table type:

Summary	Population projections data including population by broad age group, components of change and summary statistics. Mid-2014 to mid-2114
Sumpop	Population projections by five year age groups and sex. Mid-2014 to mid-2114
Opendata	Population projections by single year of age and sex with underlying data. Mid-2014 to mid 2114
